FULL AUDIT

Configuratori

configuratori.com

CENTRAL FINDING

The home page title files Configuratori under home automation.

Unnamed logos and buried pains leave build-to-order buyers with no reason to enquire. The home page opens on "Leader in Engineering to Order Transformation" and "Get the most out of your Company's assets". The two pains your best customers arrived with, redone orders and sales-to-production mistakes, appear only on the Configuration Project page. The proof is 19 unlabelled logos that the Customers page disclaims, plus Success Stories that name no customer or result. LinkedIn and Siemens-listing visitors land on pages built for neither, and the newest event they reach is an October 2024 webinar. The first move is to rebuild the home first screen around the two pains, with the Siemens Expert Partner standing and one named customer result beside it. *(Marketing & Positioning)*

I

The short version

What matters most

THE DIAGNOSIS

Your site files a build-to-order specialist under "Home Automation" and opens on "Get the most out of your Company's assets", never naming the pains your best customers came with: engineers redoing every order and mistakes between sales and production. Its proof is 19 logos with no names in text and success stories with no customer or result, and no page offers a call. Lead with those pains, put named results in words, and give buyers a working route to the questionnaire and a call.

Start here 3

01	The home page title files Configuratori under home automation.	CRITICAL
02	The 19 home client logos and the "Certified Experts since 2004" mark exist only as unlabelled pictures	CRITICAL
03	None of the four phone numbers in the header can be dialled as written from a phone	CRITICAL

Next 17

04	Seven self-descriptions compete, and the truest one sits only on the About page. (?)	HIGH
05	No captured page names a customer with a result in the measures build-to-order buyers compare	HIGH
06	No captured page offers a way to book a call, and the contact form has no option for one (?)	HIGH
07	The questionnaire, one of your two first steps, promises nothing back and is labelled as a different question	HIGH
08	The questionnaire button sits below three green buttons, in warning red, at the edge of the first screen	HIGH

09	On phones the first screen holds only the hero area and headline; the questionnaire is two screens down	HIGH
10	The Siemens Expert Partner standing appears only on the Rulestream page, unlinked to its listing and unnamed in text	HIGH
11	Fields on the goal-path forms have no label a screen reader announces	HIGH
12	The menu is sorted by catalogue and Siemens product names, with Rulestream under three headings and Contact hidden under About us	HIGH
13	Siemens names and marks outrank Configuratori's own where buyers decide.	HIGH
14	Four different offer lists across menu, home, services and contact, with no lead offer for build-to-order buyers	HIGH
15	Siemens referrals land on custom quotes, with no fixed first engagement to pass along	HIGH
16	Success stories, service cards and page banners show stock and abstract images instead of the work	HIGH
17	A "Leader in Engineering to Order Transformation" dressed in a 2019 slider template	HIGH
18	Global clients and a "Leader" claim, presented with visible neglect.	HIGH
19	Three start dates and three company names across the captured pages	HIGH
20	Main pages end in a generic footer form or a request for "impressions", with no ending that names a call or the questionnaire	MEDIUM

Later 11

21	The founders are unnamed, and the only named sales contact's number is the company's main Italy line	HIGH
22	"Webinars on ETO strategies" sends me to one session from October 2024 I can no longer watch	MEDIUM
23	Generic integrator copy on two service pages undercuts the specialist voice.	MEDIUM
24	Spelling and grammar slips on the home page and in a footer line on every page	MEDIUM
25	On phones the section heading clips to "Configuratio"	MEDIUM
26	Six button styles and three typefaces across seven pages	MEDIUM

27	Heading levels skip on most pages, and the webinar and integration pages carry several top headings	MEDIUM
28	Body text runs about 150 characters a line on Our services and Rulestream	MEDIUM
29	The Siemens page still says "Siemens PLM" beside an emblem that reads Digital Industries Software	MEDIUM
30	Configuratori's own product names follow no pattern and, in the menu, carry no tie to the company.	MEDIUM
31	Own software products sit inside a services brochure, with no licence or support terms shown	HIGH

WORTH PROTECTING

The Configuration Project page states the head of manufacturing's pain and its fix in plain words: "Every product configuration received will be correct because it is strictly controlled by the rules set. This means that only valid configurations pass through sales and engineering to the production team." This is the sentence the home page needs.

Two things only you know (chapter II). Each answer tailors the decision it links to.

Scores by angle

Each angle scores against its own anchors, out of 10. There is no overall score.

Marketing & Positioning 3/10

Weakest: proof, 3/10. The main proof is 19 unlabelled logos, disclaimed on the Customers page. Success Stories name no customer or result. The named proof (John Crane, the Siemens partner emblem) sits deep on the Rulestream page.

Brand System & Equity 3/10

Weakest: idea, 2/10. The home title reads as home automation, and seven self-descriptions compete; the truest line appears once, on the About page.

Experience & Architecture 3/10

Weakest: completion, 2/10. All four header tap-to-call links lack the + country code, and form fields and dozens of links have no name a screen reader can announce.

Interaction era: circa 2017 to 2021 · current-ness 4/10

Visual System & Craft 3/10

Weakest: system, 2/10. At least six action styles (green rectangle, green pill, red, yellow pill, yellow rectangle, lavender) and three text families across seven pages.

Visual era: circa 2016 to 2020 · current-ness 3/10

Content & Messaging 4/10

Weakest: clarity, 3/10. The home title reads "Home Automation" and the first screen names neither the reader nor the pain; only the Configuration Project page says it plainly.

Investment & Growth 4/10

Weakest: business, 4/10. Services are readable, but own software products sit in the same brochure with no licence or support terms, and no first engagement is packaged.

Market & Category 3/10

Weakest: position, 3/10. The home title reads "Home Automation..." and the first screen leads with an unbacked "Leader in Engineering to Order Transformation".

The Visitor's Chair 3/10

Weakest: proof, 3/10. Siemens partnership is linked and checkable, but no success story card names a customer or a result and the 19 logos are pictures with no text.

II

Two things only you know

Your answers sharpen the advice

These depend on what you intend, which the screens cannot show. Each answer changes the decision it links to.

1. Which idea should lead: the build-to-order problem you solve, or your Siemens Rulestream and Teamcenter specialism?

- The build-to-order problem leads
- The Siemens specialism leads

Shapes Decision 4. Until you answer, it follows the expert's recommendation.

2. When a visitor is ready to reach out, which first step should the header put first?

- The call comes first
- The questionnaire comes first
- Both carry equal weight

Shapes Decision 6. Until you answer, it follows the expert's recommendation.

III

Decisions

In order, with what to do and how to check it

01

START HERE

CRITICAL

The home page title files Configuratori under home automation.

Brand Content

WHAT I SAW

The home page's title tag reads "Home Automation Configuration and Engineering to Order". This title is what search results, browser tabs, link previews and assistants show first. The likely cause is the page name "Home" running into a title that once read "Automation, Configuration and Engineering to Order". Read as written, it describes a smart-home company. The company's name does not appear in the title at all.

WHY IT MATTERS

A head of tech who searches for configuration or engineering-to-order help, or sees the site in a Siemens listing preview, meets a title that places the company in a different trade. People searching for home automation land and leave, and the build-to-order buyers the owner wants are not matched to it. This is the label that search engines and assistants file the business under, on the route the owner says new visitors would come by. That makes it a block on the stated goal, not a wording slip.

DO THIS

Retitle the home page "Configuratori | Configuration and design automation for build-to-order manufacturers". Remove "Home" from the title template so no other page inherits it. Rewrite the meta description to open with the same idea under the name Configuratori, not "Configuratori.it". Carry that sentence into the Organization markup's description.

CHECK IT

View the home page source and a search-result preview. The title starts with Configuratori and names build-to-order manufacturers, and no title contains "Home Automation". Show the title alone to three people and ask what the company does; success is that none says smart homes.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Home Automation Configuration and Engineering to Order, page metadata
  - “Home Automation Configuration and Engineering to Order”
  - “Configuratori.it is a company specializing in product configuration, design automation and Engineering to Order platforms such as Siemens Rulestream ETO.”

02

START HERE

CRITICAL

The 19 home client logos and the "Certified Experts since 2004" mark exist only as unlabelled pictures

Visual Marketing UX

Home page, desktop, client logo carousel band below the two video frames

Home page, desktop, "Certified Experts since 2004" drawn inside the Rulestream logo image

WHAT I SAW

On the home page, the band after "Successfull Projects" is a rotating carousel of 19 client logos (filenames include Siemens.svg, BakerHughes.svg, Thyssenkrupp.svg, Mitsubishi.svg, GE1.svg, Wartsila.svg) with no alt text: 18 empty and 1 without an alt attribute. No client is named in the home page text. The Customers page shows a grid of 19 logos, also with no alt text, each a link whose only content is the image. The "Rulestream Certified Experts since 2004" mark beside the Teamcenter logo on the home page is an image (rsRobotoGreen.svg) with empty alt text, and the home page text does not repeat it. On the Rulestream page the Siemens "Expert Partner" emblem and the platform diagram carry empty alt text; that page does state the partnership in text ("Configuratori is Siemens' worldwide Service Partner"), but the home page does not. The logos sit in a separate white band below two video frames instead of under their heading.

WHY IT MATTERS

A head of tech deciding whether Configuratori has done this for companies like theirs looks first for named peers and the Siemens credential. On the home page the client names and the certification year exist only as pixels, so screen-reader

users, text-only readers, search engines and AI assistants learn none of them, and a sighted visitor sees only a few logos at a time as the carousel rotates. The named clients are the site's strongest proof and they carry no words, which is why they have to move into text first.

ACCESSIBILITY

Screen-reader users hear nothing for the 19 client logos or the home page certification mark, which exist only as images with no alt text.

DO THIS

Give each of the 19 logos alt text with the client's name (for example "Baker Hughes") on both the home carousel and the Customers grid. Add one line of real text under the band: "Configurator projects for [the clients you may name]". Set "Siemens Expert Partner, Rulestream certified since 2004" as real text beside the Teamcenter and Rulestream logos on the home page, and give the Expert Partner emblem and the platform diagram alt text that says what they show. Replace the rotating carousel with a static grid of logos at one height, so all clients are visible at once, placed directly under the "Successfull Projects" heading.

CHECK IT

Open the home and Customers pages with a screen reader or a text-only browser: each logo should be announced by its client's name, and the client line and the Siemens credential should appear as page text on the home page. On desktop, all client logos should be visible at once under their heading.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

03

START HERE

CRITICAL

None of the four phone numbers in the header can be dialled as written from a phone

UX

Home page desktop top bar with the four country phone numbers

WHAT I SAW

Every captured page carries four phone numbers in the top bar: Italy, USA, Poland and UK. The interaction map records all four tap-to-call targets without the + country code: tel:393357571048, tel:13307149301, tel:48736861972 and tel:07807 990 102. The UK number is also shown as "+44 07807 990 102", which keeps the domestic 0 after the country code. The footer's "+39 335 7571048" is the same Italian number.

WHY IT MATTERS

A head of manufacturing who taps one of these numbers to talk to someone reaches a wrong or invalid number. Calling is one of the two first steps the owner wants, and these links are the recorded call route on every captured page, so the call fails at the last tap. The visitor then concludes the company is unreachable or careless, and the enquiry is lost at the cheapest point to fix. An agent asked to ring the company reads the same broken targets.

DO THIS

Rewrite the four links as tel:+393357571048, tel:+13307149301, tel:+48736861972 and tel:+447807990102. Show the UK number as "+44 7807 990 102". Apply the same fix to the footer number and to the numbers on the Contact us page.

CHECK IT

Inspect each tel: link in the page source on three pages: every href should start with tel:+ followed by the full international number. Then tap each from a phone and confirm the dialler shows the right international number before placing any call.

For goal: Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

EVIDENCE

- Interaction map read by Crit8 from the captured pages
  - “tap-to-call tel:393357571048 (shown as "+39 335 7571048"): broken, no + country code, so a phone dials it as a local number”
  - “tap-to-call tel:07807 990 102 (shown as "+44 07807 990 102"): broken, no + country code, so a phone dials it as a local number; the number shown keeps the domestic 0 after +44”
- Home Automation Configuration and Engineering to Order
  - “Italy +39 335 7571048 USA +1 330 714 9301 Poland +48 736 861 972 UK +44 07807 990 102”
- Home Automation Configuration and Engineering to Order, desktop 1440 px, section 1 of 3 (page y 0–1,600 of 3,846 px) screenshot
  - Home page desktop top bar with the four country phone numbers

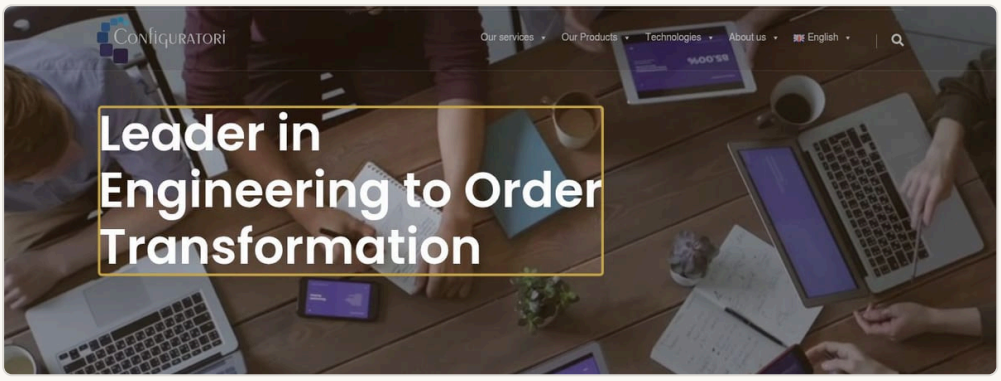

04

NEXT

HIGH

Seven self-descriptions compete, and the truest one sits only on the About page.

Brand Marketing Buyer Industry

Home page first screen, headline 'Leader in Engineering to Order Transformation'

WHAT I SAW

Across the captured pages Configuratori describes itself at least seven ways: - the title's "Home Automation" - the first-screen headline "Leader in Engineering to Order Transformation" - "Get the most out of your Company's assets" - "We are the Product Configuration Experts" - the footer's "Innovating sales processes, automating product development" - the Rulestream meta description's "Siemens' worldwide Service Partner" - the System integration page's "leading provider of system integration services" The English Our services page's meta description is in Italian. The line closest to what the business proves appears once, on the About page: tools "that enable companies to profitably “sell what is not there”". The Configuration Project page's "only valid configurations pass through sales and engineering to the production team" also appears once. Neither the owner's two buyer pains (engineers redoing every order, mistakes between sales and production) nor either of those lines is on the home first screen, in the title or in the footer.

WHY IT MATTERS

A head of manufacturing from a Siemens event, or a head of tech from a LinkedIn post, decides in seconds whether this firm solves their problem. "Get the most out of your Company's assets" would read just as true for any consultancy, bank or software vendor. "Leader in Engineering to Order Transformation" names a category most of this audience does not search by. With no single idea, nothing on the first screen tells them this is the firm that stops engineers starting every custom order from scratch, so there is no reason to fill in the questionnaire. One idea placed everywhere gives every case page, video and LinkedIn post something to prove.

DO THIS

Choose one idea built from the buyer's pain and the About line, for example "Configuratori builds the rules that let build-to-order manufacturers quote and engineer every custom order without starting from scratch". Keep "sell what is not there" as its memorable second line. Place it in five places: - the home title - the first-screen headline - the About page's first sentence - the footer blurb - the Organization description Retire "Get the most out of your Company's assets" and the generic footer sentence, and give the Our services page an English meta description.

CHECK IT

List the title, first-screen headline, About first sentence, footer blurb and Organization description side by side. All five should carry the same idea under the name Configuratori. Show the home first screen to three people in manufacturing for five seconds and ask what Configuratori does and for whom; success is that each names custom or build-to-order products.

OPEN QUESTION 1

Which idea should lead: the build-to-order problem you solve, or your Siemens Rulestream and Teamcenter specialism? The advice above is the expert's default until you answer.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Home Automation Configuration and Engineering to Order, desktop 1440 px, section 1 of 3 (page y 0–1,600 of 3,846 px) screenshot
  - Home page first screen, headline 'Leader in Engineering to Order Transformation'
- Home Automation Configuration and Engineering to Order
  - “Get the most out of your Company's assets”

05

NEXT

HIGH

No captured page names a customer with a result in the measures build-to-order buyers compare

Industry Buyer

Success Stories page, the five story cards with images, titles, teasers and Read More links

WHAT I SAW

The Success Stories page shows five cards, such as "SellFan : the Industrial Fan configurator for HVAC systems" and "Switchgear Configurator", and none names a customer or states a result. The home logo carousel of 19 images after "Successfull Projects" has "none with alt text (18 empty, 1 without an alt attribute)", and the Customers page logos are links "none with an accessible name". The home page promises to "create offers faster than your competitors" with no figure. The Who we are page claims "Fortune 500 clients" without naming one. The one named user on the Rulestream page is "John Crane uses Rulestream for 3D design with Solid Edge.", dated "Demonstration session at Solid Edge University 2016."

WHY IT MATTERS

In this category the proof that moves a head of tech is a named reference from a similar product with a before-and-after in quote turnaround, engineering hours per order or order errors reaching production, exactly the two pains the owner's best customers arrived with. Logos without stories read as a wall of names anyone could post, and anonymous story cards cannot be checked or passed to a colleague. The newest named proof is from 2016, so a buyer reads the track record as old. Without this, LinkedIn and Siemens-listing visitors have no reason to prefer Configuratori over the in-house way.

ACCESSIBILITY

Screen-reader users hear none of the customer names in the home logo carousel or the Customers page logos, which carry the site's main proof.

DO THIS

Rewrite each success-story card as customer · product · result, for example "[Customer], [industrial fans]: quote time from [days] to [hours], engineering hours per order down [percentage]", using "[industry], [country], [size]" where a name cannot be published. Give each home and Customers logo alt text with the company name and link it to its story, and put one named result on the home page beside the Siemens standing.

CHECK IT

Open the Success Stories page and the home page: every card names a customer or a described customer and states at least one result with a unit, and every logo announces its company name in a screen reader. Ask two heads of engineering which story is closest to their business and what it achieved; success is that they can answer with a number.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Success Stories - Configuratori.com
  - “SellFan : the Industrial Fan configurator for HVAC systems”

06

NEXT

HIGH

No captured page offers a way to book a call, and the contact form has no option for one

UX Marketing Buyer

Contact us page, Request for information form with interest checkboxes and "Submit now"

WHAT I SAW

Neither the menu nor any first-screen button offers "Book a call" or a calendar. The menu files Contact us under About us. The Contact us form, headed "Request for information", asks "Are you interested in :" with the options

Configuration, Design Automation, RPA and Other. It then asks for first name, last name, email, company, phone and a message, and ends with "Submit now". Nothing on the page names a call, who replies or when. The footer form on every page is headed "For Information" and holds name, email and message.

WHY IT MATTERS

A head of tech who has decided to talk looks for a call they can book, and finds an information request that sorts them by technology. This is a stated first step with no labelled route. The visitor has to translate "I want to talk about engineers redoing every order" into Configuration, Design Automation or RPA, then wait without knowing for how long. Named contacts such as Marco Lotti are listed on the contact page, but only as Italian numbers and an email, not as a bookable call.

DO THIS

Add a "Book a call" button to the header of every page. Link it to a booking page with [the person who takes the calls], [call length] and open slots. If you do not want a calendar, link it to the contact form with a "Book a call" option preselected, and add the line "[Name] replies within [time] to arrange a time." Rename "Submit now" to "Request my call".

CHECK IT

Ask five people in the target role to "arrange a conversation with this company" starting from the Rulestream page. Success is four of five reaching a booking or a call request in two clicks, without choosing a technology.

OPEN QUESTION 2

When a visitor is ready to reach out, which first step should the header put first? The advice above is the expert's default until you answer.

For goal: Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

EVIDENCE

- Contact us - Configuratori.com
  - “ConfigurationDesign AutomationRPAOther”
  - “Request for information”
- Interaction map read by Crit8 from the captured pages
  - “Contact us /ourself/contact-us/”
- Contact us - Configuratori.com, desktop 1440 px, section 1 of 2 (page y 0–1,600 of 2,461 px) screenshot
  - Contact us page, Request for information form with interest checkboxes and "Submit now"

07

NEXT

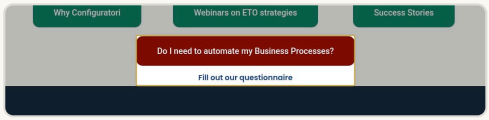

HIGH

The questionnaire, one of your two first steps, promises nothing back and is labelled as a different question

Marketing UX Buyer Industry

Do I need a configurator? page, introductory text above the embedded form

Home page, red button "Do I need to automate my Business Processes?" and "Fill out our questionnaire" line

WHAT I SAW

The home page's main red button reads "Do I need to automate my Business Processes?". It leads to a page titled "Do I Need A Configurator?", where the only offer is to "discover the advantages that the Configuratori can bring to your company". The questions sit in an embedded Microsoft form. The page does not say how long the questionnaire takes, what the respondent receives (a written assessment, a call, a score), who reads the answers or when they reply.

WHY IT MATTERS

A senior buyer gives time to a questionnaire only when they know what they get back. "Discover the advantages" promises a sales pitch, so most will not start. The button asks about business process automation while the page asks about configurators, so a head of manufacturing who clicked one question meets another and loses confidence that this step fits them. A stated return turns the questionnaire into a real reason to enquire.

DO THIS

Give the questionnaire a stated return on both the button and the page: "Is a configurator worth it for your orders? Answer [12] questions in [5 minutes] and [an engineer] sends you a written assessment within [two working days]." Use the same question on the button as on the page. Put the reply promise directly above the embedded form.

CHECK IT

Ask three target buyers, after reading the button and page, what they will receive and when. Success is that all three give the same answer without opening the form.

For goal: Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

EVIDENCE

- Do I need a configurator? - Configuratori.com
  - “Fill out the questionnaire and discover the advantages that the Configuratori can bring to your company.”
- Do I need a configurator? - Configuratori.com, desktop 1440 px, section 1 of 2 (page y 0–1,600 of 2,524 px) screenshot
  - Do I need a configurator? page, introductory text above the embedded form

NEXT

HIGH

The questionnaire button sits below three green buttons, in warning red, at the edge of the first screen

Visual

Home page, desktop, three green buttons, red questionnaire button and blue "Fill out our questionnaire" line

WHAT I SAW

Under the opening area the home page stacks three identical green buttons ("Why Configuratori", "Webinars on ETO strategies", "Success Stories", each ≈70 px tall) and, below them, a wider dark red button "Do I need to automate my Business Processes?" (white on #800101), then "Fill out our questionnaire" in blue heading type that looks like a link but is not one. On desktop the green row starts at ≈884 px, at the very bottom of a 900 px first screen, and the red button sits below it at ≈975 px. Further down, "Our Services" and "Find More" add two more green buttons.

WHY IT MATTERS

A head of tech arriving from LinkedIn meets three green buttons first, all at the same height as the questionnaire button, and has to sort them; the one the owner wants used is wider but comes last and is red, the colour people read as a warning, and the line that names the questionnaire looks clickable but leads nowhere. With no single lead action, the questionnaire reads as one option among four, and on a laptop most of it sits below the first screen.

DO THIS

Make the questionnaire the single filled button on the home first screen, placed inside the opening area under the headline, with a label that states the outcome, for example "Check if a configurator fits your orders ([time] questionnaire)". Use the site's one action colour, not red. Turn "Why Configuratori", "Webinars on ETO strategies" and "Success Stories" into a row of plain text links beneath it, and remove the separate "Fill out our questionnaire" heading by folding it into the button label.

CHECK IT

In a 1440 by 900 window, the questionnaire button should be the only filled button visible and sit fully within the first 900 px. Show the first screen to three people for five seconds and ask what the page wants them to do; success is "fill out the questionnaire".

For goal: Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

EVIDENCE

- Home Automation Configuration and Engineering to Order, desktop 1440 px, section 1 of 3 (page y 0–1,600 of 3,846 px) screenshot
  - Home page, desktop, three green buttons, red questionnaire button and blue "Fill out our questionnaire" line

HIGH

On phones the first screen holds only the hero area and headline; the questionnaire is two screens down

Visual UX

Home page, phone, first 844 px with logo, menu, hero area and headline and no button

Home page, phone, buttons starting two screens down

WHAT I SAW

At 390 px the first 844 px show the social icons, the logo, a search icon and a yellow menu button, then the hero video area (captured as its fallback desk photo) with the headline. The first button, "Why Configuratori", starts at ≈1,490 px and the red questionnaire button at ≈1,762 px, after "Get the most out of your Company's assets" and its subline are set across about eleven lines at ≈36 px. On desktop the same buttons begin at the edge of the first screen.

WHY IT MATTERS

People tapping through from a LinkedIn post land on a phone; they see the hero area and headline and must scroll past a full screen of large slogan text before any way to start an enquiry appears, so many leave before they find it.

DO THIS

At phone width, place the questionnaire button directly under the headline in the opening area, shorten the opening area to ≈400 px tall, and set the "Get the most out of your Company's assets" block at ≈22 px for the heading and 16 px for the subline.

CHECK IT

Open the home page at 390 by 844: the questionnaire button should be fully visible without scrolling.

For goal: Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

EVIDENCE

The Siemens Expert Partner standing appears only on the Rulestream page, unlinked to its listing and unnamed in text

Industry Marketing

Siemens Rulestream page, Expert Partner emblem and Siemens logo beside the partner sentence

Home page desktop, Rulestream logo with the line Certified Experts since 2004

WHAT I SAW

The Rulestream page shows an "Expert Partner, Digital Industries Software" emblem beside the Siemens logo; its file has "empty alt text". The partner sentence, "Configuratori is Siemens' worldwide Service Partner for configuration projects with Rulestream and Product Configurator software tools.", links only to the directory's front page, "https://partnerfinder.plm.automation.siemens.com", not to Configuratori's listing. The home page shows Teamcenter and Rulestream product logos and "Certified Experts since 2004" with no issuer, while the home first screen and title say nothing of the partnership.

WHY IT MATTERS

For a buyer arriving from a Siemens listing or event, partner standing in the vendor's own vocabulary is a table stake, and for a buyer who does not know Siemens names, it is the clearest outside proof of competence. As shown, the designation is legible only in an image, cannot be checked without searching the directory, and is absent from where search engines and AI assistants read first. "Certified Experts since 2004" names no certifying body and predates the 2008 founding stated on the Who we are page, so an insider cannot tell what was certified or who holds it.

DO THIS

Name the designation in text on the home first screen and in the title or meta description, for example "Siemens Digital Industries Software Expert Partner, [specialisation], since [year]", and link it to Configuratori's own listing in the Siemens partner directory. Give the emblem alt text naming the designation, add the listing as a sameAs link in the Organization data, and rewrite "Certified Experts since 2004" to say who was certified by whom, or remove it. If the current designation in Siemens's directory differs from the emblem, use the directory's exact wording everywhere.

CHECK IT

Open the home page: the designation appears in text on the first screen, and clicking it opens Configuratori's own entry in the Siemens partner directory. Inspect the emblem's alt text and the Organization data for the designation and the listing link.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

Fields on the goal-path forms have no label a screen reader announces

UX

Home page desktop footer "For Information" form with placeholder-only fields

WHAT I SAW

On the Contact us page, 15 of 18 form controls have no label a screen reader announces. The request form's first name, last name, email, company, phone and message fields are named only by placeholder text. The footer form on every captured page has 5 of 6 controls unlabelled, its name, email and message fields named only by placeholders such as "Your name here".

WHY IT MATTERS

A screen-reader user filling in the enquiry hears unnamed edit fields, and anyone who starts typing loses the placeholder that said what the field was for. These are the forms on the route to an enquiry, so the barrier sits on the stated goal itself. The same missing labels leave an assistant guessing which field takes the email or the company.

ACCESSIBILITY

Screen-reader users hear unnamed fields on the enquiry forms, and everyone loses the field's name once they start typing.

DO THIS

Give every field a visible label above it, tied to the field in the markup: "First name", "Last name", "Work email", "Company", "Phone", "What would you like to discuss?". Keep placeholders only for examples. Do the same for the footer form.

CHECK IT

Tab through the contact form and the footer form with a screen reader on. Every field should announce its label, and each label should stay visible while typing.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

HIGH

The menu is sorted by catalogue and Siemens product names, with Rulestream under three headings and Contact hidden under About us

UX Content

Home page desktop main menu: Our services, Our Products, Technologies, About us

WHAT I SAW

The top menu reads Our services, Our Products, Technologies, About us. Its entries are names such as KBE, MapIt, rsDeployer, Uipath and Boomi. Rulestream appears in three places with three destinations: Training > Rulestream, Technologies > Siemens Teamcenter > Siemens Rulestream, and Our Products > Rulestream utilities. Success Stories is filed under Our services, and Contact us under About us. The home page names the offers four ways (Product Configuration, Configuration Cost Management, Automatic Offers Generation, Systems Integration). The contact form uses a fifth vocabulary: Configuration, Design Automation, RPA, Other.

WHY IT MATTERS

Most of the audience does not know the Siemens names, and they arrive with a problem: engineers redo every order, or mistakes slip between sales and production. To find the matching help they must first learn the company's catalogue. Three Rulestream entries leave them unsure which page answers them. The two routes they need to act, proof and contact, sit under headings that do not predict them, so the menu adds hunting at the moment they would reach out.

DO THIS

Re-cut the top level around the buyer's problems and next steps: "What we solve" (Stop re-engineering every order; Stop errors between sales and production; Quote complex products faster), "Results", "Software and Siemens platforms", "About", and a top-level "Contact". Give Rulestream one page that the other mentions link to, and use the same offer names in the contact form. Start with a short tree test of these labels with five people in the target roles.

CHECK IT

Run a tree test with five people in the target roles on two tasks: "find help for engineers redoing every order" and "get in touch". Success is four of five choosing the right top-level heading first on both.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

Siemens names and marks outrank Configuratori's own where buyers decide.

Brand

Home page, Teamcenter and Rulestream wordmark band

Home page header, Configuratori logo

WHAT I SAW

On the home page, the Teamcenter wordmark spans roughly 470 px, about two and a half times the width of the Configuratori header logo, and the Rulestream wordmark spans roughly 380 px, about twice its width. The Rulestream mark carries "Certified Experts since 2004". The menu's Technologies branch lists "Siemens Teamcenter", "Teamcenter Product Cost Management", "Siemens Product Configurator" and "Siemens Rulestream", and Rulestream appears again under Training and in "Rulestream utilities". The Siemens Rulestream page opens beside the Expert Partner emblem and a SIEMENS wordmark. Its body speaks in the vendor's voice: "Siemens PLM's Rulestream is the ideal tool for the rapid development of technical, sales, and bespoke Rules-Based configurators."

WHY IT MATTERS

The owner reports that most of the target audience does not know Rulestream or Teamcenter. For them, the largest marks on the page and most of the menu are names they cannot decode. What they conclude is that Configuratori resells someone else's software, not that it solves their order-engineering problem. For the minority who come from Siemens listings, the partnership is already known, and it still needs Configuratori's own reason to be chosen among Siemens partners. Putting the company first and Siemens beneath it lets both readers see who does the work.

DO THIS

Replace the full-width Teamcenter and Rulestream band on the home page with a single endorsement line under Configuratori's own name, worded only from what the site shows, such as "Siemens Digital Industries Software Expert Partner for Rulestream and Teamcenter". Rewrite the Rulestream page's opening in Configuratori's voice, saying what Configuratori builds with Rulestream for build-to-order manufacturers. Keep the Siemens product description as the second paragraph. Name top-level menu groups by the buyer's problems and keep Siemens product names one level down.

CHECK IT

On the home first two screens, confirm Configuratori's mark is the largest identity mark and Siemens appears once as an endorsement line. Ask three people unfamiliar with Siemens software whether Configuratori sells software or builds solutions; success is that they say it builds solutions for manufacturers.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

HIGH

Four different offer lists across menu, home, services and contact, with no lead offer for build-to-order buyers

Marketing Industry

Our services page, seven service cards led by I-MAAT

WHAT I SAW

The home tiles list four capabilities: Product Configuration, Configuration Cost Management, Automatic Offers Generation and Systems Integration. The Our services menu lists eight entries, including Teamcenter Product Configurator Consulting, ETO Automation, Training and KBE. The Our services page shows seven cards, led by "I-MAAT", a co-financed research tool. The Contact form offers Configuration, Design Automation, RPA and Other. The Our services meta description, in Italian, adds Mendix, Modelica and risk analysis. Own products such as SellFan and MapIt sit in a separate menu.

WHY IT MATTERS

A head of manufacturing trying to see which engagement fits their problem meets a different list on each page, and the first services card is a research project rather than anything they would buy. With no lead offer, they cannot tell where to start and treat the firm as a general IT consultancy. One ordered list, with a lead offer for build-to-order manufacturers, lets the buyer place themselves and lets every page point to the same next step.

DO THIS

Choose one lead offer for build-to-order manufacturers, built around the two pains your best customers came with (engineers redoing every order, mistakes between sales and production), for example "Engineer-to-order configurator projects". Use one ordered service list with the same names in the menu, the home tiles, the services page and the Contact form options. Move I-MAAT and other research work to an "About" or "Research" page, and rewrite the services meta description in English to match the list.

CHECK IT

Ask three target buyers, after browsing the home page and the services page, which service they would ask about first. Success is that all three name the same lead offer, and that the menu, home tiles, services cards and Contact form options use the same names in the same order.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

Siemens referrals land on custom quotes, with no fixed first engagement to pass along

Investor Marketing Buyer

Our Services page, Strategic consulting & Assessment card teaser

WHAT I SAW

The Our Services page shows seven cards whose teasers describe topics rather than offers. The Strategic consulting & Assessment card opens "The global market is like a chess game:". The "Do I need a configurator?" page holds one sentence and an embedded Microsoft Forms frame, and says nothing about what the visitor receives after answering. The Rulestream page closes with "Interested? Let us know your impressions." No captured page names a first engagement with a scope, a duration, a deliverable or a price range.

WHY IT MATTERS

The owner says leads come from Siemens referrals and word of mouth. For this business, that is the input that compounds: delivered projects and Siemens partner managers sending the next client. A referral travels best when there is a named, bounded thing to refer to, such as "ask them for their two-week configuration assessment". Without one, each referral starts as an open conversation and depends on whoever takes the call. A fixed first step also gives the questionnaire somewhere to lead, and it is a step a head of manufacturing can approve without a full project budget. The first question diligence asks: how

long does a referred lead take to become a signed project, and what do they buy first?

DO THIS

Package the assessment as a named first engagement on the Strategic consulting & Assessment page and on the "Do I need a configurator?" page: "[name]: [duration]. We map how [orders move from sales to engineering] and deliver [a written report and a configuration roadmap], for [price or price range]." On the questionnaire page, say that answering leads to [a call to discuss the results]. Give the page link to your Siemens partner contacts and use it at the end of LinkedIn posts.

CHECK IT

Show the Strategic consulting & Assessment page to two people from build-to-order manufacturers, or colleagues standing in for them, and ask what they would buy first and what it would cost them in time and money. Success is that both name the assessment, its length and its output without needing a call.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

Success stories, service cards and page banners show stock and abstract images instead of the work

Visual Brand

Home page, desktop, hero video area, captured as its fallback stock desk photo

Home page, desktop, four generic service icons

WHAT I SAW

The home page opens on a self-hosted hero video (SplashVideo.mp4) whose fallback is a stock desk photo (izuddin-helmi-adnan-8VJDHw3daGk-unsplashflip-scaled.jpg), and presents the four services as generic icons (gears, coins, a handshake, cubes). Further down it embeds two YouTube videos, "2D Interactor - Siemens Rulestream Integration" and "[Rulestream] Custom Solutions Configured Faster". The seven Our services cards use abstract or stock images (network lines, a data dashboard, a man before chalk sketches, a crystal shape), with filenames such as pietro-jeng-n6B49ITx7NM-unsplash and fantastic-4805587_1920. The five Success Stories cards show fans, green bokeh, an old blueprint, a colour wave (wave-4116142_1920) and a purple gradient. The page banners show a finger pointing at icons (Contact), a laptop dashboard (Success Stories), gears (Do I need a configurator?), a blueprint (News & Events) and calipers (Our services). Still images of the actual work appear on the Rulestream page: its 3D CAD banner, the platform diagram with configurator screens, and nine demo videos.

WHY IT MATTERS

A head of manufacturing judges an engineering automation partner by its output: a configurator screen that turns an order into a valid bill of materials, a 3D model or drawing generated without an engineer redoing it. On the pages where the services and the delivered projects are presented, desks and abstract waves could front any IT firm, so the work is left to videos a visitor must press

play on and to one technical page, and the success stories read as blog posts rather than delivered projects.

DO THIS

Give each Success Stories card a screen or output from that project: the fan selection screen for SellFan, a generated switchgear drawing, a conveyor model for systems delivery. Replace the seven service card images with a crop of the matching screen or output, and swap the generic banners on Our services and Success Stories for a crop of real configurator work. On the home page, set a still of a configurator screen beside the generated model or drawing next to the four service icons; the projects behind the "Conveyor Belt" and "Cabinet Configuration" videos are candidates. Where client work is confidential, use an anonymised screen with names and part numbers blurred.

CHECK IT

List every still image on Our services and Success Stories again: most should show a configurator screen, a generated model, drawing or bill of materials. Show the home page's services section for five seconds to three engineering managers and ask what the company does; success is an answer about automating the configuration and engineering of orders, not general IT consulting.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

A "Leader in Engineering to Order Transformation" dressed in a 2019 slider template

Visual

Home page, desktop, headline "Leader in Engineering to Order Transformation" over the slider's hero area

Our services, desktop, darkened stock banner with white title and breadcrumb strip

WHAT I SAW

The home first screen sets "Leader in Engineering to Order Transformation" in large white type over a full-width slide run by Slider Revolution 6.1.3, which plays a hero video (SplashVideo.mp4) with a darkened stock desk photo as its fallback. Every captured inner page opens with the same template pattern: a darkened photo banner with a white title and a grey breadcrumb strip. Our services, Success Stories and News & Events then list card grids with small blue "Read More" text links. Image uploads run from 2020/06 to 2024/12, so this older visual language was built later. Every footer carries a large "Imprendi Green 2022" badge and a Twitter bird icon. The site looks about seven years old.

WHY IT MATTERS

Buyers choosing a partner to transform their engineering process compare this site with current software and consultancy sites, and a stock slider template tells them the company has not modernised its own front door. The look places Configuratori as a small web agency, below the Siemens partner and Fortune 500 supplier it describes on other pages, so the headline's claim reads as unsupported.

DO THIS

Replace the slider and its video with a static first screen: one sentence on what you do for build-to-order manufacturers, a real product screen or generated model beside it, and one questionnaire button. On inner pages, replace the darkened stock banners with a plain title band or a crop of that page's own work, and on the card pages make the story and service cards fully clickable instead of relying on small "Read More" links. In the footer, show the sustainability badge at about a third of its current size, and update the social icons to the current set. If a sustainability rating newer than 2022 exists, show that one instead.

CHECK IT

Put the new home first screen beside two or three current sites of engineering automation firms and ask a colleague who knows none of them which looks older; success is that Configuratori is not picked out. The home first screen should no longer rotate slides.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Home Automation Configuration and Engineering to Order, desktop 1440 px, section 1 of 3 (page y 0–1,600 of 3,846 px) screenshot
  - Home page, desktop, headline "Leader in Engineering to Order Transformation" over the slider's hero area

NEXT

HIGH

Global clients and a "Leader" claim, presented with visible neglect.

Brand

Home page, misspelled heading 'Successfull Projects'

Home page footer, Imprendigreen 2022 badge

WHAT I SAW

The first screen claims "Leader in Engineering to Order Transformation". The About page states "Fortune 500 clients". The home logo carousel shows names such as Baker Hughes, Thyssenkrupp, Mitsubishi and GE. Neglect markers on the same pages: - The heading above those logos is misspelled "Successfull Projects". - None of the 19 logos has alt text. - The newest award shown, in every footer, is the "Imprendigreen 2022" badge, and no footer shows a copyright year. - The Rulestream page names the vendor "Siemens PLM" and offers "Demonstration session at Solid Edge University 2016." as its customer example.

WHY IT MATTERS

People choosing an engineering automation partner cannot test the work in advance, so they read the presentation as a sample of the care they will get. A misspelled heading over Baker Hughes and Thyssenkrupp, a 2022 badge and a 2016 demo tell a head of tech that the company has stopped investing in how it presents itself. Coming from a firm that sells transformation, this makes Configuratori look smaller and further behind than the clients it names. Fixing these markers lets the client list do its job.

DO THIS

Correct the heading to "Successful projects". Give each client logo alt text with the company's name. Replace the 2016 Solid Edge example with the most recent project the company can name [project, year]. Use the vendor's current name in the Rulestream page's opening. Replace or date-check the footer badge [if a newer rating exists].

CHECK IT

Open the home and Rulestream pages and confirm there is no misspelling in headings and the newest dated example is from the last two years. In the page source, each client logo has its company name as alt text.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

HIGH

Three start dates and three company names across the captured pages

Investor Brand

Home page, Rulestream logo reading Certified Experts since 2004

WHAT I SAW

Who we are says "Configuratori Srl, founded in 2008". The home page says "We have been helping companies automate their sales and design processes since 2009". The home-page Rulestream logo reads "Certified Experts since 2004", four years before that founding year. The name also varies: "Configuratori.it S.r.L." heads the Contact us block, Who we are uses "Configuratori Srl", the home meta description says "Configuratori.it is a company", and the footer reads "© Copyright Configuratori.com". The headcount, 25 engineers and developers, appears on one page only. The header phone lines (Italy, USA, Poland, UK) do not match the listed offices (Florence, Milan, Turin, Helsinki, Warsaw, Cleveland): there is a UK line but no UK office, and a Helsinki office but no Finland line.

WHY IT MATTERS

None of these is impossible on its own. An Srl can be written with or without its domain, and founders can hold a certification older than their company. But a partner checking the registration, or an assistant asked who this company is, meets several answers for the same facts, and inconsistent basics read to backers as weak control. The first question diligence asks: which entity holds the customer contracts and the Siemens partnership, and when did it start trading?

DO THIS

Publish one fact block and reuse it word for word on Who we are, Contact us, the footer and the Organization structured data: "[exact registered name], founded [2008], VAT 05906050488, headquartered in Florence, offices in Milan, Turin, Helsinki, Warsaw and Cleveland, [25] engineers and developers". Change the home line to the same founding year. Reword the badge so it says what 2004 counts: "[what began in 2004, for example the year the founding partners started working with Rulestream]". Explain the UK phone line, or list the UK presence it serves.

CHECK IT

Open the home page, Who we are, Contact us and the footer. The legal name, founding year and office list should read the same on all four, and the structured data should carry the same legalName and foundingDate.

EVIDENCE

Brand System & Equity · The company's name appears in six forms across pages and metadata.. Their read

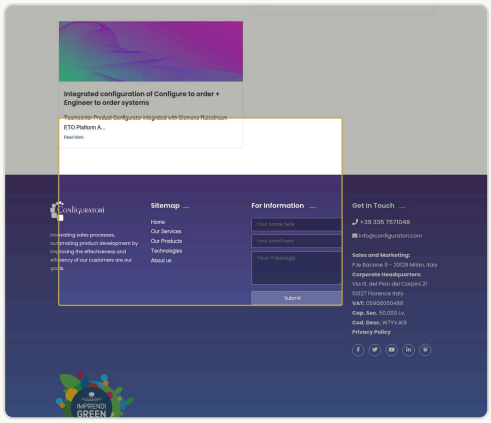

20

NEXT

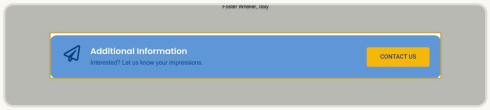

MEDIUM

Main pages end in a generic footer form or a request for "impressions", with no ending that names a call or the questionnaire

UX

Success Stories page, last case card followed directly by the footer "For Information" form

Siemens Rulestream page, closing "Additional Information" box

WHAT I SAW

Of the captured pages, Success Stories, Our services and News & Events end their content directly above the footer, whose "For Information" form asks for name, email and message and offers "Submit". Siemens Rulestream, Configuration Project, Customers and System integration close with a box reading "Interested? Let us know your impressions.". On Rulestream that box's button, "CONTACT US", links to the Contact us page.

WHY IT MATTERS

A head of tech who has just read a matching case is at peak interest. The page then asks them to send information or share impressions, which neither offers a conversation nor tells them what happens next. None of these page endings links to the questionnaire or offers to book a call, so they must go back to the header numbers or the menu to start one.

DO THIS

End each main page with one block: "Facing [the problem this page covers]? Book a call with [name] or take the [N]-minute questionnaire." Link "Book a call" to [the booking page, or tel:+393357571048 until one exists] and the questionnaire to /configuration/do-i-need-a-configurator/, and remove "Let us know your impressions".

CHECK IT

Scroll to the end of the Success Stories, Rulestream, Our services and News & Events pages. Each should end with both routes, named in words, above the footer, and each link should open the call route or the questionnaire page.

For goal: Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

EVIDENCE

21

LATER

HIGH

The founders are unnamed, and the only named sales contact's number is the company's main Italy line

Investor

Contact us page, single named sales contact block

WHAT I SAW

Who we are says the company was "founded in 2008 by three partners" and names none of them. The Contact us page names one person, "Marco Lotti marco.lotti@configuratori.com", with "+ 39-335-7571048". The same number is the Italy line in the header of every captured page and the only phone in the footer's Get In Touch block. The only other named staff are Andrea Buda, "Chief Technology Office at Configuratori.it", on the webinar page, and Matteo Casetta in that page's author markup. No captured page shows a leadership team, roles or a board.

WHY IT MATTERS

A partner, acquirer or senior hire looking at a firm of 25 engineers sees one named contact for sales, whose number is also the Italy line in the header and the only phone in the footer, and three founders whose names and roles they cannot check. Backers price that as key-person risk. For a firm whose founders each claim thirty years of experience, succession is the obvious next question. The first question diligence asks: who leads the company today, and who takes over sales and delivery if Marco Lotti or a founding partner steps back?

DO THIS

Add a leadership block to Who we are naming [the three founding partners], their roles and their current responsibilities, plus Andrea Buda as CTO with the title written correctly. Name a second contact for sales or delivery on Contact us. If the main Italy line is a personal mobile, route it to a company number.

CHECK IT

Open Who we are and Contact us. A reader should find at least three named people with roles, and two routes to a named person, without opening the webinar page.

EVIDENCE

MEDIUM

"Webinars on ETO strategies" sends me to one session from October 2024 I can no longer watch

Buyer Content

WHAT I SAW

The home page button "Webinars on ETO strategies" leads to a single webinar page dated "October 23, 2024" whose only route is "Registration link: https://lnkd.in/dDbRSyxe". The page text names no recording, slides or next date. News & Events lists that webinar and one other item.

WHY IT MATTERS

Coming from LinkedIn, I am only curious, and a webinar is the low-risk way I would get to know you. A past date with a registration link tells me I missed it and nothing is waiting, so the one step that suits where I am leads nowhere. The topic, "automation from inquiry to order", is exactly what I would have watched.

DO THIS

Put the recording, or a short write-up of the session with what it showed, at the top of the webinar page, and add the next date with a registration button. Rename the home button to match what it opens, for example "Watch: standardise custom products for faster quotes".

CHECK IT

Click "Webinars on ETO strategies" from the home page: it opens something to watch or read today, or a future date to register for.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Interaction map read by Crit8 from the captured pages

23

LATER

MEDIUM

Generic integrator copy on two service pages undercuts the specialist voice.

Brand Investor

WHAT I SAW

The System integration page says "We are a leading provider of system integration services" and lists client industries including "Banking and finance",

"Healthcare and life sciences" and "Retail and e-commerce". The Our services page repeats generic claims such as "We have a customer-centric approach, which means we listen to your needs and expectations". By contrast, the Configuration Project page speaks as a specialist about woodworking tools, pumping systems and panel cutting, and names the CAD platforms it automates: "SolidWorks, Inventor, SolidEdge".

WHY IT MATTERS

A head of tech checking whether Configuratori understands build-to-order engineering reaches a service page that could belong to any IT integrator and names banks and retailers as its clients. That undercuts the specialist idea at the point where they are judging depth, and it reads like copy written for no one in particular. One voice that talks about manufacturers' orders, rules and drawings would make every page sound like the same expert team.

DO THIS

Rewrite the System integration page around the integrations the company actually builds for manufacturers, for example configurator to ERP, CAD and PLM. Name the systems the site already lists: SAP and Oracle on the Rulestream page, and SolidWorks, Inventor and SolidEdge on the Configuration Project page. Remove the banking, healthcare and retail list unless [named projects in those sectors] exist. Replace the Our services claims list with what the specialist pages already show.

CHECK IT

Read the System integration and Our services pages: every industry and system named is one the company shows work for. A reader can tell, without the logo, that the pages come from the same manufacturing specialist as the Configuration Project page.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- System integration - Configuratori.com, page text only (partners)
  - “We are a leading provider of system integration services”
  - “Banking and finance”
- Our services - Configuratori.com
  - “We have a customer-centric approach, which means we listen to your needs and expectations”
- Configuration Project - Configuratori.com, page text only (a case study)
  - “Our automations work with different platforms (SolidWorks, Inventor, SolidEdge)”
- Siemens Rulestream - Configuratori.com

- “Connection to and from the management systems (SAP and Oracle included)”

ALSO RAISED BY

---

24

LATER

MEDIUM

Spelling and grammar slips on the home page and in a footer line on every page

Content

Home desktop, Successfull Projects heading

WHAT I SAW

Slips across the captured pages: "Successfull Projects" (home section heading); the footer on every page, "Innovating sales processes, automating product development by improving the effectiveness and efficiency of our customers are our goals."; "© Copyright Configuratori.com All right reserved"; "Chief Technology Office" (webinar); "its' headquarters" and "Configuration allow the manufacturer" (Who we are); "The tools for wood can be considered an assembled" (Configuration Project); "Enhance a feature per item that does not exist in the management system" (Rulestream); the UK number shown as "+44 07807 990 102". Engineer-to-order appears as "Engineering to Order", "Engineering-to-Order (ETO)", "Engineer to order" and "ETO".

WHY IT MATTERS

A firm selling rules that make every configuration correct is judged on precision, and a misspelt heading on the home page plus a broken sentence in every footer read as carelessness to an engineering director. Four forms of the category name also make it look like several things. These are minutes of editing.

DO THIS

Fix: "Successful projects"; footer "We innovate sales processes and automate product development so our customers work more effectively."; "All rights reserved"; "Chief Technology Officer"; "its headquarters"; "Configuration allows"; "+44 7807 990 102". Use one form everywhere: "engineer-to-order (ETO)" at first use, then "ETO". Then have a native English editor read the home, services, Rulestream and Configuration Project pages once.

CHECK IT

Run a spell and grammar check over the page text of the captured pages and search the site for "Engineer to order" and "Engineering to Order": success is no flagged slips and one form of the term.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Home Automation Configuration and Engineering to Order
  - “Successfull Projects”
- News & Events - Configuratori.com
  - “Innovating sales processes, automating product development by improving the effectiveness and efficiency of our customers are our goals.”

  - Home desktop, Successfull Projects heading

25

LATER

MEDIUM

On phones the section heading clips to "Configuratio"

Visual

Home page, phone, heading with "Configuratio" cut at the right edge

WHAT I SAW

At 390 px, "We are the Product Configuration Experts" keeps ≈56 px type, so "Configuration" runs off the right edge and shows as "Configuratio". The opening headline's "Engineering to Order" line also touches the right edge.

WHY IT MATTERS

The word that names what the company does is the word cut off, a visible craft slip for a firm selling engineering precision, seen by every LinkedIn visitor who scrolls.

DO THIS

Scale this heading to 32 to 36 px at phone width and the opening headline to ≈32 px, so the longest word fits inside 16 px side margins.

CHECK IT

At 390 px and 360 px widths, every word in both headings should sit fully inside the screen with visible margin.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Home Automation Configuration and Engineering to Order, phone 390 px, section 2 of 4 (page y 1,950–3,900 of 6,722 px) screenshot
  - Home page, phone, heading with "Configuratio" cut at the right edge
- Home Automation Configuration and Engineering to Order
  - “We are the Product Configuration Experts”

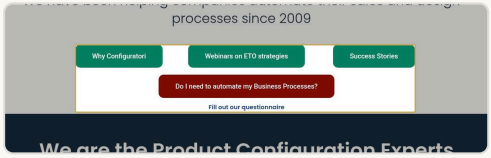

26

LATER

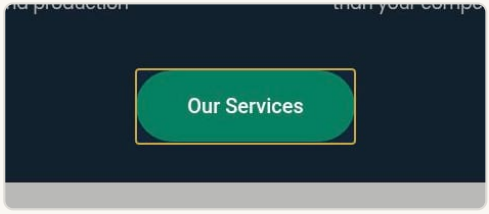

MEDIUM

Six button styles and three typefaces across seven pages

Visual

Home page, desktop, green rectangles and red button

Home page, desktop, green pill "Our Services"

WHAT I SAW

Across the captured pages, "do this" takes six forms: green rounded rectangles (home first screen), green pills ("Our Services", "Find More", "Rulestream Utilities", "Teamcenter Utilities"), a dark red rectangle (home questionnaire), a yellow pill "Submit now" (Contact), a yellow square-cornered "CONTACT US" (Rulestream) and a pale lavender rectangle "Submit" (footer, every page), plus small blue "Read More" text links on card grids. Type uses three families by visible traits: a geometric sans for headings and the footer, a condensed sans for buttons and the menu, and an Arial-like face for body text on Contact, Rulestream, Success Stories and Our services.

WHY IT MATTERS

Visitors learn what an enquiry button looks like from one consistent style; here every page teaches a new signal, and the two actions the owner wants used, the questionnaire and contact, take the two colours that appear least often. The mixed type adds to the sense of a site assembled from parts.

DO THIS

Pick one filled style for enquiry actions and use it everywhere: the green pill at one radius and one label size, for the questionnaire, Contact "Submit now", Rulestream "CONTACT US" and the footer Submit. Make secondary actions green outlines and everything else text links. Retire red, yellow and lavender as button fills. Keep two typefaces: the geometric sans for headings and one sans for body and buttons, replacing the Arial-like body text.

CHECK IT

Inventory the buttons again on the seven captured pages: every enquiry action should share one filled style, secondary actions one outline style, and no more than two text families should appear.

For goal: Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

EVIDENCE

- Home Automation Configuration and Engineering to Order, desktop 1440 px, section 1 of 3 (page y 0–1,600 of 3,846 px) screenshot
  - Home page, desktop, green rectangles and red button
- Home Automation Configuration and Engineering to Order, desktop 1440 px, section 2 of 3 (page y 1,600–3,200 of 3,846 px) screenshot
  - Home page, desktop, green pill "Our Services"

  - Siemens Rulestream, desktop, yellow square-cornered "CONTACT US"
- Do I need a configurator? - Configuratori.com, desktop 1440 px, section 2 of 2 (page y 1,600–2,524 of 2,524 px) screenshot
  - Do I need a configurator?, desktop footer, lavender "Submit" bar

27

LATER

MEDIUM

Heading levels skip on most pages, and the webinar and integration pages carry several top headings

UX

WHAT I SAW

The home page jumps from h1 to h4, and its h4 is the non-clickable "Fill out our questionnaire". Contact us, Success Stories, Siemens Rulestream, News & Events and Our services also skip from h1 to h4. The webinar page has two h1 headings, and System integration has three.

WHY IT MATTERS

Screen-reader users scan a page by its headings. On these pages the outline jumps levels and, on two pages, offers several competing top headings. The home page's questionnaire invitation is announced as a heading rather than something to activate.

ACCESSIBILITY

Screen-reader users scanning by headings meet skipped levels and several top headings, and hear the questionnaire invitation as a heading they cannot activate.

DO THIS

Give each page one h1 that names it. Nest section titles as h2 and h3 in order, and turn "Fill out our questionnaire" into link text rather than a heading.

CHECK IT

List the headings on the home, webinar and System integration pages with a screen reader or a heading outline tool. Each should show one h1 and no skipped levels.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Home Automation Configuration and Engineering to Order, accessibility facts measured by Crit8
  - “Headings: h1 ×1, h2 ×6, h3 ×4, h4 ×1; skips h1 to h4.”
- Webinar: Standardize your product customization for faster time to quote - Configuratori.com, accessibility facts measured by Crit8
  - “Headings: h1 ×2, h2 ×3; 2 h1 headings.”

- System integration - Configuratori.com, accessibility facts measured by Crit8
  - “Headings: h1 ×3, h2 ×6, h3 ×1, h4 ×1; 3 h1 headings; skips h1 to h4.”

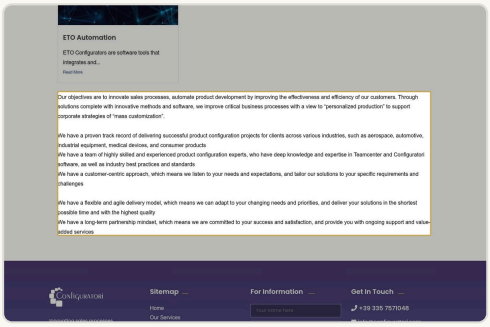

28

LATER

MEDIUM

Body text runs about 150 characters a line on Our services and Rulestream

Visual

Our services, desktop, full-width body paragraphs

Siemens Rulestream, desktop, full-width line about standard sales configurators

WHAT I SAW

On Our services the five "We have..." paragraphs run the full ≈1,110 px content width at ≈16 px in an Arial-like face, about 150 characters a line, with no subheadings or list marks. On the Rulestream page the line beginning "Standard Sales Configurators assemble products" runs the same width.

WHY IT MATTERS

Lines that long make readers lose their place, so the company's five reasons to choose it become a grey wall that a busy head of tech skims past.

DO THIS

Cap body text at ≈700 px wide (about 70 characters a line) on all inner pages, and set the five "We have..." claims as a short list with a bold lead phrase for each.

CHECK IT

Count characters on three full body lines on Our services and Rulestream: each should fall between about 60 and 80.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Our services - Configuratori.com, desktop 1440 px, section 2 of 3 (page y 1,600–3,200 of 3,213 px) screenshot
  - Our services, desktop, full-width body paragraphs
- Our services - Configuratori.com
  - “Our objectives are to innovate sales processes, automate product development by improving the effectiveness and efficiency of our customers.”
- Siemens Rulestream - Configuratori.com, desktop 1440 px, section 2 of 4 (page y 1,600–3,200 of 6,226 px) screenshot
  - Siemens Rulestream, desktop, full-width line about standard sales configurators

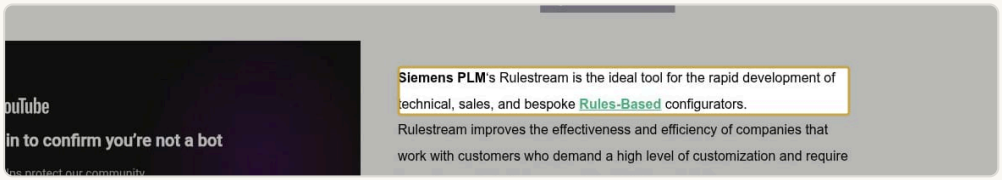

29

LATER

MEDIUM

The Siemens page still says "Siemens PLM" beside an emblem that reads Digital Industries Software

Industry

Siemens Rulestream page, lead paragraph beginning Siemens PLM's Rulestream beside the video

WHAT I SAW

The Rulestream page text uses "Siemens PLM" in its lead paragraph and in the heading "Siemens PLM Rulestream will:", while the Expert Partner emblem on the same page reads "Digital Industries Software", and the webinar page names "Siemens Digital Industries Software".

WHY IT MATTERS

Visitors arriving from Siemens listings and events know the vendor by its current name, and the site's own pages show which name is current, so the older label in the lead copy reads as a page last written years ago. For a partner whose main proof is Siemens standing, that undercuts the impression of a current, active relationship.

DO THIS

Replace "Siemens PLM" with "Siemens Digital Industries Software" in the Rulestream page text and headings, and use the same name wherever the site describes the partnership.

CHECK IT

Search the Rulestream page text for "Siemens PLM": it returns no matches, and the vendor name matches the emblem and the webinar page.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Siemens Rulestream - Configuratori.com
  - “Siemens PLM Rulestream will:”
- Siemens Rulestream - Configuratori.com, desktop 1440 px, section 1 of 4 (page y 0–1,600 of 6,226 px) screenshot
  - Siemens Rulestream page, lead paragraph beginning Siemens PLM's Rulestream beside the video
- Webinar: Standardize your product customization for faster time to quote - Configuratori.com, page text only (a first-screen button destination)
  - “Roman Kabisch – Portfolio Development Teamcenter at Siemens Digital Industries Software”

30

LATER

MEDIUM

Configuratori's own product names follow no pattern and, in the menu, carry no tie to the company.

Brand

WHAT I SAW

The menu's Our Products branch mixes coined names ("SellFan", "MapIt"), a Rulestream-prefixed code ("rsDeployer"), a technical label ("C-graph & 2D Interactor") and descriptions ("Salesforce Plugin", "Inventor Integration"). The Configuration Project page names a further product, "SellPumps", that does not appear in the menu. Some products sit under "Rulestream utilities", which reads as Siemens property rather than Configuratori's.

WHY IT MATTERS

The industry configurators such as SellFan are the clearest sign that Configuratori builds software of its own, and a head of manufacturing who sees a fan or pump configurator might recognise their own trade. With no shared pattern and no visible tie to the company name in the menu, the products read as unrelated tools or Siemens add-ons. They then add nothing to what people remember about Configuratori.

DO THIS

Choose one pattern and apply it in the menu, page titles and product pages. For example, keep the industry configurators as a family (SellFan, SellPumps) shown "by Configuratori", and name the Rulestream add-ons descriptively as "Configuratori tools for Rulestream" (Deployer, Salesforce connector, Inventor connector, MapIt). Add SellPumps to the Our Products menu [if it is still sold].

CHECK IT

Open the Our Products menu and each product page title: every product follows the chosen pattern and shows the Configuratori name beside it. Ask two people unfamiliar with the site which company makes SellFan; success is that both say Configuratori.

For goal: get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order

EVIDENCE

- Interaction map read by Crit8 from the captured pages
  - “SellFan /product/sellfan/”
  - “rsDeployer /rs-deployer/”
  - “C-graph & 2D Interactor /product/c-graph/”
- Configuration Project - Configuratori.com, page text only (a case study)
  - “Configuratori has created the SellPumps software platform”

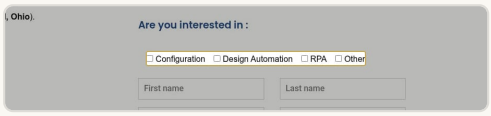

31

LATER

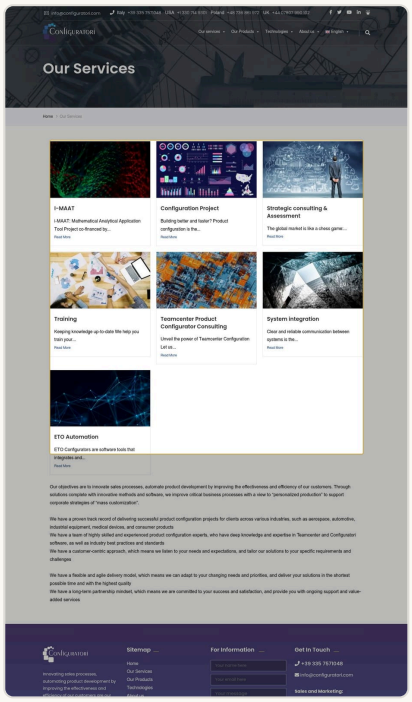

HIGH

Own software products sit inside a services brochure, with no licence or support terms shown

Investor

Contact us page, "Are you interested in" checkboxes

Our Services page, service card grid including I-MAAT

WHAT I SAW

The Our Products menu lists seven entries: C-graph & 2D Interactor, Rulestream utilities (with rsDeployer, Salesforce Plugin, Inventor Integration and MapIt beneath it) and SellFan. The Configuration Project page names a further product, "the SellPumps software platform", and the System integration page names a "Configuratori Integration Platform". The Our Services page puts I-MAAT, a co-financed research project, among its seven service cards. The only hint of anything that renews is the line "provide you with ongoing support and value-added services". The Contact us form asks "Are you interested in :" and offers only Configuration, Design Automation, RPA and Other. No captured page states how any product is sold: as a licence, a subscription, a maintenance contract or a support contract.

WHY IT MATTERS

A partner or acquirer reading these pages sees a project consultancy. The line that could renew, licences and maintenance on the Rulestream utilities and SellFan, has no form, terms or adoption shown, and an enquiry about it has to go under "Other". People who back engineering consultancies value contracted

maintenance and licence income well above one-off projects, so a business whose renewing line is invisible gets priced as day-rate work. The first question diligence asks: what share of revenue renews each year, and from which product?

DO THIS

Give the products their own section. For each product, state who it is for, the form (licence, subscription or maintenance contract), what support includes and [how many customers use it]. Move I-MAAT out of the service cards into News & Events or Who we are, as a research project. Add "Software licence or support" as an option on the Contact us form. Name the maintenance or support contract on Our Services as an offer with its term. If the /product/ pages already state licence and support terms, link those terms from Our Services and the contact form instead of rewriting them.

CHECK IT

Open Our Services, a product page and Contact us. A reader should be able to say, for SellFan and rsDeployer, how each is paid for and what support comes with it, and pick a matching option on the form without choosing "Other".

EVIDENCE

- Interaction map read by Crit8 from the captured pages
  - “Rulestream utilities /product/rulestream-utilities/”

Competitive landscape

Product configuration / CPQ and engineering automation for build-to-order and engineer-to-order manufacturers

AMERICAS · EMEA · SOURCES CHECKED 1 NOV 2026

CRITERION	**Configuratori.com** configuratori.com REVIEWED PRODUCT	**DriveWorks** driveworks.co.uk	**Elfsquad CPQ** elfsquad.io	**encoway CPQ** encoway.de/en	**Configure One** configureone.com/cpq-for-manufacturing	**Tacton CPQ** tacton.com/about-us
Regional evidence	*Not confirmed*	States it is sold worldwide via local authorized resellers; no country list given. [6]	*Not confirmed*	*Not confirmed*	*Not confirmed*	*Not confirmed*
Configuration linked to engineering or production data	Engineering BOM generated by a rules-based process matching requirements to modules and variants; Rulestream engineers products at the time of order. [2,3]	Captured rules generate order-specific sales documents and SOLIDWORKS manufacturing data. [6]	Describes itself as a connecting layer making the pre-production process digital; ETO BOM generation is not stated. [10]	*Not confirmed*	Rules engine covers engineered-to-order specs and multi-level BOMs. [13]	Connects sales, engineering and order fulfillment with a digital thread; BOM generation not stated. [5]
Basis for cost and price calculation in quotes	Costs and prices calculated from a structured database of raw materials and labor costs. [2]	Calculates pricing during configuration; the cost basis is not stated. [6]	Dynamic pricing from configuration, pricing rules, discounts and customer agreements; branded PDF or Word quotes. [10]	Accelerates quotation creation, including for customized mechanical engineering; cost basis not stated. [11]	*Not confirmed*	*Not confirmed*
CAD integration and drawing or model output	States CAD integration for automatic 3D model generation, plus exploded drawings and DXF output. [3]	Automatically creates order-specific SOLIDWORKS parts, assemblies and drawings. [6]	States CAD integration; drawing or model generation is not stated. [10]	*Not confirmed*	*Not confirmed*	*Not confirmed*
Stated ERP/CRM integrations	Connects to management systems including SAP and Oracle, and to CAD, PLM and ERP stacks. [3]	*Not confirmed*	*Not confirmed*	States interaction with SAP ERP, Salesforce and Microsoft Dynamics CRM. [12]	Approved output flows to ERP and CRM via Revalize Integration Hub. [13]	*Not confirmed*

CRITERION	**Configuratori.com** configuratori.com REVIEWED PRODUCT	**DriveWorks** driveworks.co.uk	**Elfsquad CPQ** elfsquad.io	**encoway CPQ** encoway.de/en	**Configure One** configureone.com/cpq-for-manufacturing	**Tacton CPQ** tacton.com/about-us
Who builds and maintains the configurator	Configuratori builds the system on Siemens tools and offers introductory and in-depth Rulestream courses; post-launch ownership is not stated. [2,3]	Positions configurators as set up in-house without programming or consultants. [6]	Elfsquad builds the configurator from customer materials; then managed by the customer's own team. [9,10]	Full-service model: standard software, individual solutions built on it, and an in-house consulting team. [12]	AI Model Builder creates models from specs, drawings and BOMs; product managers and engineers update rules directly. [13]	Partners help implement; certification for customer engineers and product managers who maintain it (e-learning 3 150 EUR / 3 465 USD per participant). [5,7]
First engagement step offered	Homepage invites visitors to fill out a questionnaire; Rulestream page asks for impressions. [1,3]	Offers a 30-day free trial of DriveWorks Solo with no credit card. [6]	Offers a live demo with a specialist and a free trial. [8,10]	Offers advice on how to prepare a CPQ project. [11]	*Not confirmed*	*Not confirmed*

Selected alternatives for this review, not a market-share ranking. Public claims do not establish signed-in product behaviour.

WHY THESE ALTERNATIVES

- **DriveWorks** · Design automation, 3D configurator and CPQ software for manufacturers of custom products. [6]
- **Elfsquad CPQ** · CPQ and product configurator for manufacturers, built from customer drawings, price lists and specs. [8]
- **encoway CPQ** · CPQ software plus consulting for modular products in capital goods and manufacturing. [11]
- **Configure One** · CPQ software for manufacturers turning product rules and engineering knowledge into guided configuration. [13]
- **Tacton CPQ** · CPQ SaaS platform for manufacturers selling complex products. [4]

COMPARATIVE FINDINGS

Post-launch ownership of configuration rules is explicit for alternatives but not on Configuratori's pages

Configuratori states it builds systems on Siemens tools and offers Rulestream courses. DriveWorks says configurators are set up in-house without consultants; Elfsquad builds the configurator then hands it to the customer's team; encoway offers software plus a consulting team; Configure One says product managers and engineers update rules directly. [3,6,9,12,13]

What it means: If buyers comparing options ask who changes rules after go-live, the alternatives' pages answer it directly while the excerpts from Configuratori leave it open, which may matter for buyers unfamiliar with Rulestream.

Consider: Consider stating on solution pages who maintains rules after delivery and how the Rulestream courses support that, then check the wording with existing customers.

Cost-based quoting is described differently from rule- and discount-based pricing

Configuratori says costs and prices are calculated from a structured database of raw materials and labor costs. DriveWorks states it calculates pricing, Elfsquad prices dynamically from rules, discounts and customer agreements, and Configure One varies pricing by partner, geography or agreement. [2,6,10,13]

What it means: For buyers whose pain is quotes drifting from actual cost or errors between sales and production, a cost-database basis is a distinguishing communicated claim in these sources; it is a vendor statement, not tested behavior.

Consider: Consider making the cost-basis approach more visible where buyers first land, supported by a customer example, and verify the claim's scope before featuring it.

First engagement steps range from questionnaire to trial, demo or project advice

Configuratori's homepage offers a questionnaire. DriveWorks offers a 30-day free trial, Elfsquad a live demo and a free trial, and encoway advice on preparing a CPQ project. The excerpts do not show a call-booking option on Configuratori's pages. [1,6,8,11]

What it means: If the intended first actions are the questionnaire and booking a call, visitors comparing vendors may expect an equally direct second path; whether a call option exists elsewhere on the site is not shown in these sources.

Consider: Check whether a call-booking option is visible next to the questionnaire on key pages, and review the questionnaire's framing for visitors unsure whether they need a configurator.

SCOPE NOTES

- No source states Configuratori's country availability in the Americas or EMEA; availability is also unknown for Elfsquad, Configure One and Tacton.
- encoway's only regional statement covers the DACH region, not all of EMEA; DriveWorks says it is sold worldwide without listing countries.
- No software pricing is available for any row; Tacton's figure is a per-participant certification fee and is not comparable to product pricing.
- All cells reflect vendor-communicated claims, not tested product behavior; Configure One's AI Seller is stated as beta Q4 2026 with GA January 2027.
- Epicor CPQ and Infor CPQ were excluded because their excerpts are too thin to answer the criteria.
- Sources were checked on 2026-11-01; vendor recognitions such as Tacton's analyst mentions were not independently verified.

V

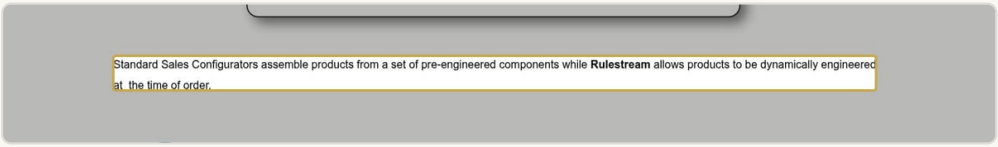

What's working

Worth protecting

The Configuration Project page states the head of manufacturing's pain and its fix in plain words: "Every product configuration received will be correct because it is strictly controlled by the rules set. This means that only valid configurations pass through sales and engineering to the production team." This is the sentence the home page needs. (Content & Messaging)

- Configuration Project - Configuratori.com, page text only (a case study)
  - “Every product configuration received will be correct because it is strictly controlled by the rules set.”
  - “This means that only valid configurations pass through sales and engineering to the production team.”

The Rulestream page draws the distinction insiders use to separate a sales configurator from engineer-to-order automation: "Standard Sales Configurators assemble products from a set of pre-engineered components while Rulestream allows products to be dynamically engineered". That one sentence tells a head of tech the company knows why their orders defeat ordinary configurators. (Market & Category)

Siemens Rulestream page, sentence below the Rulestream Platform diagram

- Siemens Rulestream - Configuratori.com
  - “Standard Sales Configurators assemble products from a set of pre-engineered components while Rulestream allows products to be dynamically engineered”
- Siemens Rulestream - Configuratori.com, desktop 1440 px, section 2 of 4 (page y 1,600–3,200 of 6,226 px) screenshot
  - Siemens Rulestream page, sentence below the Rulestream Platform diagram

The About page holds an owned line worth protecting: tools "that enable companies to profitably “sell what is not there”". It says what Configuratori does for a build-to-order manufacturer better than any line on the home

page. It is the strongest candidate for the company's one idea. (Brand System & Equity)

- Who we are - Configuratori.com, page text only (a first-screen button destination)
  - “enable companies to profitably “sell what is not there””

The site shows real configuration work rather than describing it. The Rulestream page has a platform diagram with actual rule-editor and configurator screens. The Rulestream and Configuration Project pages embed named demos such as "Conveyor Belt", "Cabinet Configuration" and "Rulestream ETO Burner Hip Pocket Configuration". This is owned imagery that could replace the stock photographs. (Brand System & Equity)

Rulestream page, 'Rulestream Platform' diagram with configurator screens

- Siemens Rulestream - Configuratori.com, desktop 1440 px, section 2 of 4 (page y 1,600–3,200 of 6,226 px) screenshot
  - Rulestream page, 'Rulestream Platform' diagram with configurator screens
- Embedded media read by Crit8 from the pages' HTML
  - “video from youtube.com "Rulestream ETO Burner Hip Pocket Configuration"”

The pages name the systems a build-to-order buyer already runs, which is a parity point this category eliminates on: "Connection to and from the management systems (SAP and Oracle included)" on the Rulestream page and "Our automations work with different platforms (SolidWorks, Inventor, SolidEdge)" on the Configuration Project page. (Market & Category)

- Siemens Rulestream - Configuratori.com
  - "Connection to and from the management systems (SAP and Oracle included)"
- Configuration Project - Configuratori.com, page text only (a case study)
  - "Our automations work with different platforms (SolidWorks, Inventor, SolidEdge) for the automatic generation of drawings and files"

The Configuration Project page shows specialist depth in build-to-order products: woodworking tools sized to a profile, pressurization and pumping systems with a dedicated platform, and panel cutting from the 3D model. This is the specialism that should lead the position. (Market & Category)

- Configuration Project - Configuratori.com, page text only (a case study)
  - "Configuratori has created the SellPumps software platform, adaptable to all company situations, for the configuration, design and generation of offers for pumping and pressurization systems."

VI

AI readiness

Can assistants find, read and cite it

How easily AI assistants can find, read and cite this site, judged from the site itself. No assistant was queried.

- CRAWL ACCESS **Ready**. robots.txt blocks none of the AI crawlers it was checked for. All 12 pages checked carry their text in the page as served.
- ENTITY CLARITY **Missing**. Raised in Decision 1, Decision 4, Decision 16.
- STRUCTURED DATA **Partial**. Markup found: BreadcrumbList, ListItem, Organization, WebPage, WebSite and ImageObject. The organisation markup has no logo and profile links.
- ANSWERABILITY **Missing**. 75 of 111 images checked have no text alternative. Raised in Decision 2, Decision 4, Decision 5.
- CORROBORATION **Missing**. The site points to 1 third-party page that confirms it. Raised in Decision 10.
- FRESHNESS **Partial**. Newest dated item: April 2025. No year in the footer.
- ACTIONABLE ROUTES **Missing**. 4 of 4 phone links cannot be dialled as written. 1 form sits in a frame from another site. 46 form fields have no label. Raised in Decision 3, Decision 6, Decision 7.

FIX FIRST

1. Decision 1: The home page title files Configuratori under home automation.
2. Decision 2: The 19 home client logos and the "Certified Experts since 2004" mark exist only as unlabelled pictures
3. Decision 3: None of the four phone numbers in the header can be dialled as written from a phone

VII

How I read it

Who it is for and what I looked at

AUDIT GOALS

1. get more enquiries from head of tech, head of manufacturing, at manufacturers that build to order *(from your brief)*
2. Give a visitor who is ready to reach out a clear first step: the "Do I need a configurator?" questionnaire or booking a call with someone on the team.

AUDIENCE

Heads of tech and heads of manufacturing at manufacturers that build to order. Some know Siemens names such as Rulestream, Teamcenter and KBE, and most do not. They arrive from LinkedIn posts and articles or from Siemens partner listings and events.

THEIR TASK

A head of tech or head of manufacturing at a build-to-order manufacturer arrives from LinkedIn or a Siemens partner listing. Across the captured pages (home, Our services, Siemens Rulestream, Success Stories, News & Events, Do I need a configurator? and Contact us), they need to understand what Configuratori does for their kind of business, believe it, and start an enquiry by filling out the questionnaire or booking a call.

WHAT THIS IS

marketing site, Siemens software partner and consultancy; Engineering automation for build-to-order manufacturers

BOUNDARIES I KEPT TO

- The owner reports that the website brings almost no enquiries and little traffic.
- Leads come today from Siemens referrals and word of mouth. Almost none come from the website.
- The preferred first steps are the "Do I need a configurator?" questionnaire and booking a call with someone on the team. Both were named, in no stated order.
- Likely sources of new visitors are the company's LinkedIn posts and articles, and Siemens partner listings and events.
- Familiarity with Siemens names (Rulestream, Teamcenter, KBE) among the target audience is mixed: some know them, most do not, and the owner is not sure.
- Best customers first came with two pains: engineers redid every order from scratch, and mistakes slipped between sales and production.
- No budget, schedule, team capacity or analytics data was stated.

ASSUMPTIONS

- "Head of tech" is read as the technical or engineering lead (for example a CTO or engineering director) at a build-to-order manufacturer, deciding whether to enquire about configuration and engineering automation.
- The two industries are listed in the order given. Siemens partnership is treated as the company's category and build-to-order engineering automation as the buyer's problem space.
- The device context is treated as mixed. LinkedIn visitors may arrive on phones, while senior manufacturing buyers are likely to evaluate on desktop.
- The owner's two named first steps (questionnaire, call) are both treated as valid entry steps, without assuming a priority between them.
- No preferred offer was stated among the services, the Siemens-based work and the own software products (such as SellFan). The review treats the whole offer as the subject.

VIII

The angles

8 expert reads

MARKETING 3/10 · 7 RAISED

Marketing & Positioning

Unnamed logos and buried pains leave build-to-order buyers with no reason to enquire.

The home page opens on "Leader in Engineering to Order Transformation" and "Get the most out of your Company's assets". The two pains your best customers arrived with, redone orders and sales-to-production mistakes, appear only on the Configuration Project page. The proof is 19 unlabelled logos that the Customers page disclaims, plus Success Stories that name no customer or result. LinkedIn and Siemens-listing visitors land on pages built for neither, and the newest event they reach is an October 2024 webinar. The first move is to rebuild the home first screen around the two pains, with the Siemens Expert Partner standing and one named customer result beside it.

SCORE 3/10

OFFER	4/10. The category is named on the first screen, but the buyer's pains, a lead offer and any entry scope are missing, and the offer lists differ across menu, home, services and contact.
PROOF	3/10. The main proof is 19 unlabelled logos, disclaimed on the Customers page. Success Stories name no customer or result. The named proof (John Crane, the Siemens partner emblem) sits deep on the Rulestream page.
NEXT STEPS	3/10. The questionnaire promises no return, no page offers a call, and the lighter step is a webinar that took place in October 2024.
SOURCES	3/10. No page serves LinkedIn content or Siemens-listing arrivals. Titles and descriptions carry product names, an Italian description and "Home Automation" instead of the buyer's situations.

WHAT THIS ANGLE RAISED

- **The main proof is 19 unlabelled logos the site itself disclaims, and no Success Story names a customer or result** · critical · Fix: Decision 2

  The home page backs "Leader in Engineering to Order Transformation" with a carousel of 19 logos under "Successfull Projects", including Siemens, Baker Hughes, Thyssenkrupp and GE. None has alt text, and no line says whether each company is a customer, a partner or a project. The Customers page shows the same kind of logo grid followed by a notice that the logos "have been used for explanatory purposes only". All five Success Stories teasers on the Success Stories page name a product type ("SellFan", "Switchgear Configurator") but no customer, no industry company and no number. The only named customer use, John Crane with Rulestream at Solid Edge University 2016, sits near the bottom of the Rulestream page. The Configuration Project page claims payback "in a few months" with no case behind it.

  A head of manufacturing deciding whether to trust an outside firm with their order process looks for a comparable manufacturer and a result, and here finds logos that the site says are only illustrative. That reads as borrowed credibility, so the visit ends without an enquiry. The strongest names you have are doing no work because no relationship or outcome sits beside them. Turning even one logo into a named case with a before-and-after gives the buyer something to believe and to forward to colleagues.

  ACCESSIBILITY

  Screen-reader users hear none of the 19 customer names on the home page, so the main proof is closed to them.

- **The home page never names the two pains that brought your best customers; they surface only on the Configuration Project page** · high · Fix: Decision 4

  The home first screen reads "Leader in Engineering to Order Transformation", "Get the most out of your Company's assets" and "We have been helping companies automate their sales and design processes since 2009". The four tiles below it are capabilities: Product Configuration, Configuration Cost Management, Automatic Offers Generation and Systems Integration. Neither pain your best customers came with (engineers redoing every order, mistakes slipping between sales and production) appears on the home page. The Configuration Project page states both: "Adapting products to customer specifications takes time and resources" and "only valid configurations pass through sales and engineering to the production team."

A head of tech arriving from a LinkedIn post looks for their own problem on the first screen before deciding whether this firm is for them. "Get the most out of your Company's assets" could sit on any consultancy's site, so the visitor files you as a generalist and leaves. The firm's real difference, rules that make only buildable orders reach production, is two clicks away on a page few will open. Leading with the pain and that mechanism is a words-and-placement change that tells the right buyer in seconds that this is for them.

- **The questionnaire, one of your two first steps, promises nothing back and is labelled as a different question** · high · Fix: Decision 7

  The home page's main red button reads "Do I need to automate my Business Processes?". It leads to a page titled "Do I Need A Configurator?", where the only offer is to "discover the advantages that the Configuratori can bring to your company". The questions sit in an embedded Microsoft form. The page does not say how long the questionnaire takes, what the respondent receives (a written assessment, a call, a score), who reads the answers or when they reply.

  A senior buyer gives time to a questionnaire only when they know what they get back. "Discover the advantages" promises a sales pitch, so most will not start. The button asks about business process automation while the page asks about configurators, so a head of manufacturing who clicked one question meets another and loses confidence that this step fits them. A stated return turns the questionnaire into a real reason to enquire.

- **No captured page offers to book a call, the other first step you want** · high · Fix: Decision 6

  Every captured page ends in the same footer form with name, email and message fields, labelled "For Information". The Contact page's "Request for information" form asks "Are you interested in :" with the options Configuration, Design Automation, RPA and Other. It offers no call booking, no choice of time and no stated reply time. The Rulestream page's closing box says "Interested? Let us know your impressions." and leads to the Contact page.

  A head of tech who has read enough and wants to talk is handed a general message box and a request for their "impressions", so the intent to book a call has gone by the time they reach the form. With no reply time stated, the buyer cannot tell whether a person will come back this week, and a ready buyer from a Siemens event may simply not follow up. A direct booking route keeps that intent intact.

- **Four different offer lists across menu, home, services and contact, with no lead offer for build-to-order buyers** · high · Fix: Decision 14

The home tiles list four capabilities: Product Configuration, Configuration Cost Management, Automatic Offers Generation and Systems Integration. The Our services menu lists eight entries, including Teamcenter Product Configurator Consulting, ETO Automation, Training and KBE. The Our services page shows seven cards, led by "I-MAAT", a co-financed research tool. The Contact form offers Configuration, Design Automation, RPA and Other. The Our services meta description, in Italian, adds Mendix, Modelica and risk analysis. Own products such as SellFan and MapIt sit in a separate menu.

A head of manufacturing trying to see which engagement fits their problem meets a different list on each page, and the first services card is a research project rather than anything they would buy. With no lead offer, they cannot tell where to start and treat the firm as a general IT consultancy. One ordered list, with a lead offer for build-to-order manufacturers, lets the buyer place themselves and lets every page point to the same next step.

- **No page describes a first engagement, how long it takes or what sets its cost** · medium · Fix: Decision 15

  None of the captured pages describes a scoped starting engagement: what a first project or assessment includes, how long it runs, or what factors set its cost. The "Strategic consulting & Assessment" card on Our services, the natural entry step, opens with "The global market is like a chess game:…". The Configuration Project page describes a project management method but no starting scope.

  A head of tech who wants to champion this internally needs something to take to finance: a scope, a duration and a cost range or the factors behind one. Without that, the only way to learn whether you fit their budget is a conversation, which buyers in this category usually delay. A defined entry offer lowers the risk of the first step and gives the questionnaire and the call a clear next stage to lead into.

- **Siemens partner standing sits only on the Rulestream page, and its link points to the listing's front page rather than your entry** · medium · Fix: Decision 10

  The statement "Configuratori is Siemens' worldwide Service Partner" and the Expert Partner emblem appear only on the Rulestream page. The home page shows a Rulestream logo reading "Certified Experts since 2004" as an image, with no text on the partner relationship. The only outbound corroborating link is "https://partnerfinder.plm.automation.siemens.com/", the finder's front page rather than Configuratori's own entry. The site's Organization data lists 0

sameAs links. The 19 customer logos link to the customers' own websites, not to cases.

A head of manufacturing arriving from a Siemens listing wants confirmation they reached the partner Siemens pointed to. The home page gives that only as a logo picture, and the one confirming link drops them on a search page. Assistants and sceptical buyers likewise get no third-party page that confirms your standing or your cases. The Siemens partnership is your strongest outside endorsement, and it should sit where Siemens-listing visitors land.

LIMITS OF THIS VIEW

- The LinkedIn posts and the Siemens partner listing entry that send visitors here were not supplied, so I judged landing match from the pages alone. Seeing them would sharpen the LinkedIn and Siemens-listing findings.

BRAND 3/10 · 8 RAISED

Brand System & Equity

Filed as home automation and led by Siemens marks, the specialist never registers.

Across the captured pages Configuratori describes itself at least seven ways: home automation in the title, a "Leader" on the first screen, "Product Configuration Experts", a Siemens service partner, a system integrator for banks and retailers, and the About page's true line about helping manufacturers "sell what is not there". The root cause is that no single idea was ever chosen. Siemens product names, a template's leftovers and stock imagery fill the space where Configuratori's own idea should sit. As a result, a head of tech who has never heard of Rulestream sees a software reseller, not a firm that stops engineers redoing every order.

SCORE 3/10

IDEA		2/10. The home title reads as home automation, and seven self-descriptions compete; the truest line appears once, on the About page.
ARCHITECTURE		3/10. Siemens wordmarks and product names outrank Configuratori on the home page and in the menu, and the company's own name appears in several forms.

IDENTITY	4/10. A consistent header mark, but the template's name is the footer logo's alt text and stock imagery stands in for the real configurator work.
CALIBRE	4/10. A named organisation with a named sales contact and real client logos, presented with a misspelled heading, a 2022 badge and 2016 proof points.
VOICE	4/10. The register swings from Siemens brochure copy to generic integrator text for banking and retail.

WHAT THIS ANGLE RAISED

- **The home page title files Configuratori under home automation.** · critical · Fix: Decision 1

  The home page's title tag reads "Home Automation Configuration and Engineering to Order". This title is what search results, browser tabs, link previews and assistants show first. The likely cause is the page name "Home" running into a title that once read "Automation, Configuration and Engineering to Order". Read as written, it describes a smart-home company. The company's name does not appear in the title at all.

  A head of tech who searches for configuration or engineering-to-order help, or sees the site in a Siemens listing preview, meets a title that places the company in a different trade. People searching for home automation land and leave, and the build-to-order buyers the owner wants are not matched to it. This is the label that search engines and assistants file the business under, on the route the owner says new visitors would come by. That makes it a block on the stated goal, not a wording slip.

- **Seven self-descriptions compete, and the truest one sits only on the About page.** · high · Fix: Decision 4

  Across the captured pages Configuratori describes itself at least seven ways: - the title's "Home Automation" - the first-screen headline "Leader in Engineering to Order Transformation" - "Get the most out of your Company's assets" - "We are the Product Configuration Experts" - the footer's "Innovating sales processes, automating product development" - the Rulestream meta description's "Siemens' worldwide Service Partner" - the System integration page's "leading provider of system integration services" The English Our services page's meta description is in Italian. The line closest to what the business proves appears once, on the About page: tools "that enable

companies to profitably “sell what is not there”". The Configuration Project page's "only valid configurations pass through sales and engineering to the production team" also appears once. Neither the owner's two buyer pains (engineers redoing every order, mistakes between sales and production) nor either of those lines is on the home first screen, in the title or in the footer.

A head of manufacturing from a Siemens event, or a head of tech from a LinkedIn post, decides in seconds whether this firm solves their problem. "Get the most out of your Company's assets" would read just as true for any consultancy, bank or software vendor. "Leader in Engineering to Order Transformation" names a category most of this audience does not search by. With no single idea, nothing on the first screen tells them this is the firm that stops engineers starting every custom order from scratch, so there is no reason to fill in the questionnaire. One idea placed everywhere gives every case page, video and LinkedIn post something to prove.

- **Siemens names and marks outrank Configuratori's own where buyers decide.** · high · Fix: Decision 13

  On the home page, the Teamcenter wordmark spans roughly 470 px, about two and a half times the width of the Configuratori header logo, and the Rulestream wordmark spans roughly 380 px, about twice its width. The Rulestream mark carries "Certified Experts since 2004". The menu's Technologies branch lists "Siemens Teamcenter", "Teamcenter Product Cost Management", "Siemens Product Configurator" and "Siemens Rulestream", and Rulestream appears again under Training and in "Rulestream utilities". The Siemens Rulestream page opens beside the Expert Partner emblem and a SIEMENS wordmark. Its body speaks in the vendor's voice: "Siemens PLM‘s Rulestream is the ideal tool for the rapid development of technical, sales, and bespoke Rules-Based configurators."

  The owner reports that most of the target audience does not know Rulestream or Teamcenter. For them, the largest marks on the page and most of the menu are names they cannot decode. What they conclude is that Configuratori resells someone else's software, not that it solves their order-engineering problem. For the minority who come from Siemens listings, the partnership is already known, and it still needs Configuratori's own reason to be chosen among Siemens partners. Putting the company first and Siemens beneath it lets both readers see who does the work.

- **The company's name appears in six forms across pages and metadata.** · high · Fix: Decision 19

Name forms across the captured pages and metadata: - "Configuratori": the header logo - "Configuratori.com": the footer copyright, "© Copyright Configuratori.com All right reserved", and the logo's alt text - "Configuratori.it": the home meta description and the webinar page ("Chief Technology Office at Configuratori.it") - "Configuratori.it S.r.L.": the Contact page - "Configuratori Srl": the About page - "the Configuratori": the questionnaire page The Organization markup has a name but no logo and 0 sameAs links, so nothing ties the name to the company's own profiles.

A head of manufacturing who heard the name at a Siemens event and searches for it later meets .com, .it and two legal forms. They have to work out whether these are one company or an Italian parent and an international arm. Search engines and assistants face the same question without a joining record, so the company is harder to name and connect to its LinkedIn presence, which the owner expects to bring new visitors. One trading name and one legal name, stated the same way everywhere, removes the doubt.

- **The template's name labels the company logo, and stock imagery stands in for the work.** · high · Fix: Decision 16

  The footer logo file configuratori_logoFullWhite.svg carries the alt text "Nortech", the name of the WordPress theme, on all 12 captured pages. The footer on every page credits "Created by Fabbrika". The home first screen's fallback image is an Unsplash stock photograph of people at laptops. Three of the five Success Stories cards use abstract stock images, green bokeh circles, a coloured wave and a pink gradient (files such as "wave-4116142_1920-300x225.jpg"), and all five card images have empty alt text. Meanwhile the Rulestream page holds real configurator screens and named demo videos.

  Screen readers, search engines and assistants that read the footer logo are told the company is called Nortech. That labels the brand's own mark with a template's name. A head of tech opening Success Stories expects to see a fan, a switchgear cabinet or a conveyor configured. Bokeh and gradients tell them nothing about the work and make the cases look like blog filler. The company already owns better pictures of what it does, and using them would make every page recognisably Configuratori's.

  ACCESSIBILITY

  Screen-reader users hear the company's footer logo announced as "Nortech", a name that is not the company's.

- **Global clients and a "Leader" claim, presented with visible neglect.** · high · Fix: Decision 18

The first screen claims "Leader in Engineering to Order Transformation". The About page states "Fortune 500 clients". The home logo carousel shows names such as Baker Hughes, Thyssenkrupp, Mitsubishi and GE. Neglect markers on the same pages: - The heading above those logos is misspelled "Successfull Projects". - None of the 19 logos has alt text. - The newest award shown, in every footer, is the "Imprendigreen 2022" badge, and no footer shows a copyright year. - The Rulestream page names the vendor "Siemens PLM" and offers "Demonstration session at Solid Edge University 2016." as its customer example.

People choosing an engineering automation partner cannot test the work in advance, so they read the presentation as a sample of the care they will get. A misspelled heading over Baker Hughes and Thyssenkrupp, a 2022 badge and a 2016 demo tell a head of tech that the company has stopped investing in how it presents itself. Coming from a firm that sells transformation, this makes Configuratori look smaller and further behind than the clients it names. Fixing these markers lets the client list do its job.

- **Generic integrator copy on two service pages undercuts the specialist voice.** · medium · Fix: Decision 23

  The System integration page says "We are a leading provider of system integration services" and lists client industries including "Banking and finance", "Healthcare and life sciences" and "Retail and e-commerce". The Our services page repeats generic claims such as "We have a customer-centric approach, which means we listen to your needs and expectations". By contrast, the Configuration Project page speaks as a specialist about woodworking tools, pumping systems and panel cutting, and names the CAD platforms it automates: "SolidWorks, Inventor, SolidEdge".

  A head of tech checking whether Configuratori understands build-to-order engineering reaches a service page that could belong to any IT integrator and names banks and retailers as its clients. That undercuts the specialist idea at the point where they are judging depth, and it reads like copy written for no one in particular. One voice that talks about manufacturers' orders, rules and drawings would make every page sound like the same expert team.

- **Configuratori's own product names follow no pattern and, in the menu, carry no tie to the company.** · medium · Fix: Decision 30

  The menu's Our Products branch mixes coined names ("SellFan", "MapIt"), a Rulestream-prefixed code ("rsDeployer"), a technical label ("C-graph & 2D Interactor") and descriptions ("Salesforce Plugin", "Inventor Integration"). The Configuration Project page names a further product, "SellPumps", that does

not appear in the menu. Some products sit under "Rulestream utilities", which reads as Siemens property rather than Configuratori's.

The industry configurators such as SellFan are the clearest sign that Configuratori builds software of its own, and a head of manufacturing who sees a fan or pump configurator might recognise their own trade. With no shared pattern and no visible tie to the company name in the menu, the products read as unrelated tools or Siemens add-ons. They then add nothing to what people remember about Configuratori.

LIMITS OF THIS VIEW

- No captured page says whether SellFan, MapIt, rsDeployer and C-graph are sold on their own or only inside Siemens projects, so the product-naming finding treats them as Configuratori products that should sit under the company name.

UX

3/10 · 9 RAISED

Experience & Architecture

A ready buyer finds no working phone link and only one hidden questionnaire door.

Every captured page shows four country numbers whose tap-to-call links lack the + country code, and no captured page offers a way to book a call. The questionnaire, the other first step, has one captured entry: a red question-button on the home page. The line under it, "Fill out our questionnaire", is not a link.

SCORE 3/10

ROUTES		3/10. Neither stated first step has a labelled route on most pages: no captured page offers a call booking, and the questionnaire is linked from the home page only.
STRUCTURE		3/10. The menu is sorted by service catalogue and Siemens product names, Rulestream sits under three headings, and Contact is filed under About us.
ASKS		4/10. The questionnaire and both forms state no return, no timing and no reply owner, and the contact form's options include neither a call nor the questionnaire.

COMPLETION

2/10. All four header tap-to-call links lack the + country code, and form fields and dozens of links have no name a screen reader can announce.

Interaction era: circa 2017 to 2021 · current-ness 4/10

- Slider Revolution 6.1.3 hero slider with a self-hosted background video
- hover dropdown menu three levels deep, repeated as a footer sitemap
- a placeholder-only "For Information" footer form on every page
- teaser cards cut off with "Read More"
- questionnaire embedded as a third-party Microsoft form frame

WHAT THIS ANGLE RAISED

- **None of the four phone numbers in the header can be dialled as written from a phone** · critical · Fix: Decision 3

  Every captured page carries four phone numbers in the top bar: Italy, USA, Poland and UK. The interaction map records all four tap-to-call targets without the + country code: tel:393357571048, tel:13307149301, tel:48736861972 and tel:07807 990 102. The UK number is also shown as "+44 07807 990 102", which keeps the domestic 0 after the country code. The footer's "+39 335 7571048" is the same Italian number.

  A head of manufacturing who taps one of these numbers to talk to someone reaches a wrong or invalid number. Calling is one of the two first steps the owner wants, and these links are the recorded call route on every captured page, so the call fails at the last tap. The visitor then concludes the company is unreachable or careless, and the enquiry is lost at the cheapest point to fix. An agent asked to ring the company reads the same broken targets.

- **No captured page offers a way to book a call, and the contact form has no option for one** · high · Fix: Decision 6

  Neither the menu nor any first-screen button offers "Book a call" or a calendar. The menu files Contact us under About us. The Contact us form, headed "Request for information", asks "Are you interested in :" with the options Configuration, Design Automation, RPA and Other. It then asks for first name, last name, email, company, phone and a message, and ends with "Submit now". Nothing on the page names a call, who replies or when. The footer form on every page is headed "For Information" and holds name, email and message.

  A head of tech who has decided to talk looks for a call they can book, and finds an information request that sorts them by technology. This is a stated

first step with no labelled route. The visitor has to translate "I want to talk about engineers redoing every order" into Configuration, Design Automation or RPA, then wait without knowing for how long. Named contacts such as Marco Lotti are listed on the contact page, but only as Italian numbers and an email, not as a bookable call.

- **The questionnaire asks for effort and promises nothing specific back** · high · Fix: Decision 7

  The questionnaire page says only "Fill out the questionnaire and discover the advantages that the Configuratori can bring to your company.", plus a confidentiality note. It does not state the number of questions, the time needed, who reads the answers, what the respondent receives or when. The questionnaire itself is a form embedded from forms.office.com in a frame set in the markup at 640 × 10,000 px. A head of tech on this page is offered no other route to a call beside the frame.

  A head of tech deciding whether to spend time on this weighs the cost against the return. The page names neither: it gives no length, so they cannot tell whether it takes two minutes or twenty, and "discover the advantages" reads as a sales pitch, not an answer to their problem. People who start may stop halfway, and people who finish do not know whether a person or a mailbox will reply. The questions sit inside a third-party frame on another domain, so a script or assistant completing it on a buyer's behalf has to work through that frame.

- **The menu is sorted by catalogue and Siemens product names, with Rulestream under three headings and Contact hidden under About us** · high · Fix: Decision 12

  The top menu reads Our services, Our Products, Technologies, About us. Its entries are names such as KBE, MapIt, rsDeployer, Uipath and Boomi. Rulestream appears in three places with three destinations: Training > Rulestream, Technologies > Siemens Teamcenter > Siemens Rulestream, and Our Products > Rulestream utilities. Success Stories is filed under Our services, and Contact us under About us. The home page names the offers four ways (Product Configuration, Configuration Cost Management, Automatic Offers Generation, Systems Integration). The contact form uses a fifth vocabulary: Configuration, Design Automation, RPA, Other.

  Most of the audience does not know the Siemens names, and they arrive with a problem: engineers redo every order, or mistakes slip between sales and production. To find the matching help they must first learn the company's catalogue. Three Rulestream entries leave them unsure which page answers

them. The two routes they need to act, proof and contact, sit under headings that do not predict them, so the menu adds hunting at the moment they would reach out.

- **Fields on the goal-path forms have no label a screen reader announces** · high · Fix: Decision 11

  On the Contact us page, 15 of 18 form controls have no label a screen reader announces. The request form's first name, last name, email, company, phone and message fields are named only by placeholder text. The footer form on every captured page has 5 of 6 controls unlabelled, its name, email and message fields named only by placeholders such as "Your name here".

  A screen-reader user filling in the enquiry hears unnamed edit fields, and anyone who starts typing loses the placeholder that said what the field was for. These are the forms on the route to an enquiry, so the barrier sits on the stated goal itself. The same missing labels leave an assistant guessing which field takes the email or the company.

  ACCESSIBILITY

  Screen-reader users hear unnamed fields on the enquiry forms, and everyone loses the field's name once they start typing.

- **Customer logos and many links have no name a screen reader can announce** · high · Fix: Decision 2

  The home page's 19-logo "Successfull Projects" carousel has no alt text on any logo. On the Customers page, each of 19 logos is a link to another website with the image as its only content and no accessible name, giving 31 unnamed links on that page. Unnamed links counted per captured page: 12 on the home page, 17 on Success Stories, 19 on Our services, 13 on News & Events and 14 on Siemens Rulestream. Success Stories also repeats "Read More" five times, with no destination in the words.

  A screen-reader user checking whether Configuratori has worked for companies like theirs hears nothing for Siemens, Baker Hughes, Thyssenkrupp or Wartsila. That is the proof a build-to-order buyer checks before enquiring. On Customers, these users hear 19 identical unnamed links. Five "Read More" links read out of context do not say which case each opens.

  ACCESSIBILITY

  Screen-reader users hear nothing for the customer logos and cannot tell the repeated case links apart, so the proof behind an enquiry is silent.

- **Main pages end in a generic footer form or a request for "impressions", with no ending that names a call or the questionnaire** · medium · Fix: Decision 20

Of the captured pages, Success Stories, Our services and News & Events end their content directly above the footer, whose "For Information" form asks for name, email and message and offers "Submit". Siemens Rulestream, Configuration Project, Customers and System integration close with a box reading "Interested? Let us know your impressions.". On Rulestream that box's button, "CONTACT US", links to the Contact us page.

A head of tech who has just read a matching case is at peak interest. The page then asks them to send information or share impressions, which neither offers a conversation nor tells them what happens next. None of these page endings links to the questionnaire or offers to book a call, so they must go back to the header numbers or the menu to start one.

- **On the phone, the first screen offers neither a call nor the questionnaire, and the only phone number sits in the footer** · medium · Fix: Decision 9

  The phone header on the home page shows social icons, the logo, a search icon and a menu button, but no phone number or email. The first phone screen holds only the headline "Leader in Engineering to Order Transformation". The questionnaire button sits about two screens down, at roughly page y 1,760. The only visible phone number is in the footer, at roughly page y 5,830 of 6,722.

  A head of tech who opens a LinkedIn link on their phone sees no way to call or start the questionnaire without scrolling past the headline and three other buttons. On desktop the four numbers sit in the top bar. On the phone the call route is about seven screens down, in the footer.

- **Heading levels skip on most pages, and the webinar and integration pages carry several top headings** · medium · Fix: Decision 27

  The home page jumps from h1 to h4, and its h4 is the non-clickable "Fill out our questionnaire". Contact us, Success Stories, Siemens Rulestream, News & Events and Our services also skip from h1 to h4. The webinar page has two h1 headings, and System integration has three.

  Screen-reader users scan a page by its headings. On these pages the outline jumps levels and, on two pages, offers several competing top headings. The home page's questionnaire invitation is announced as a heading rather than something to activate.

  ACCESSIBILITY

  Screen-reader users scanning by headings meet skipped levels and several top headings, and hear the questionnaire invitation as a heading they cannot activate.

LIMITS OF THIS VIEW

- The questionnaire's questions, length and confirmation sit inside the Microsoft form frame and were not seen. That material would sharpen or soften the finding on what the questionnaire asks and returns.
- No form submission was made, so the confirmation after the contact form and the footer form is unseen. It could change the part of the asks finding about what happens next.

VISUAL

3/10 · 8 RAISED

Visual System & Craft

The 19 client logos and the "Certified Experts since 2004" mark are images with no alt text, and the look is a 2019 slider template that contradicts "Leader in Engineering to Order Transformation".

SCORE 3/10

IMAGERY	3/10. Stock and abstract images lead home, Our services, Success Stories and every banner; the only images of real work sit on the Rulestream page, and the client logos carry no alt text.
HIERARCHY	3/10. The home first screen offers four near-equal buttons with the questionnaire in red at the edge of the screen, and inner pages put the enquiry step last and lightest.
SYSTEM	2/10. At least six action styles (green rectangle, green pill, red, yellow pill, yellow rectangle, lavender) and three text families across seven pages.
LEGIBILITY	5/10. Measured home text passes, but the footer form's placeholders and Submit label are faint, a phone heading clips to "Configuratio", and inner-page body lines run about 150 characters.

Visual era: circa 2016 to 2020 · current-ness 3/10

- Powered by Slider Revolution 6.1.3 running the home opening slide
- full-width background video with centred white headline over a darkened stock desk photo
- darkened stock-photo title banners with breadcrumb strips on every inner page
- image-card grids with small Read More text links

- image uploads from 2020/06, built after those conventions peaked

WHAT THIS ANGLE RAISED

- **The 19 home client logos and the "Certified Experts since 2004" mark exist only as unlabelled pictures** · critical · Fix: Decision 2

  On the home page, the band after "Successfull Projects" is a rotating carousel of 19 client logos (filenames include Siemens.svg, BakerHughes.svg, Thyssenkrupp.svg, Mitsubishi.svg, GE1.svg, Wartsila.svg) with no alt text: 18 empty and 1 without an alt attribute. No client is named in the home page text. The Customers page shows a grid of 19 logos, also with no alt text, each a link whose only content is the image. The "Rulestream Certified Experts since 2004" mark beside the Teamcenter logo on the home page is an image (rsRobotoGreen.svg) with empty alt text, and the home page text does not repeat it. On the Rulestream page the Siemens "Expert Partner" emblem and the platform diagram carry empty alt text; that page does state the partnership in text ("Configuratori is Siemens' worldwide Service Partner"), but the home page does not. The logos sit in a separate white band below two video frames instead of under their heading.

  A head of tech deciding whether Configuratori has done this for companies like theirs looks first for named peers and the Siemens credential. On the home page the client names and the certification year exist only as pixels, so screen-reader users, text-only readers, search engines and AI assistants learn none of them, and a sighted visitor sees only a few logos at a time as the carousel rotates. The named clients are the site's strongest proof and they carry no words, which is why they have to move into text first.

  ACCESSIBILITY

  Screen-reader users hear nothing for the 19 client logos or the home page certification mark, which exist only as images with no alt text.

- **Success stories, service cards and page banners show stock and abstract images instead of the work** · high · Fix: Decision 16

  The home page opens on a self-hosted hero video (SplashVideo.mp4) whose fallback is a stock desk photo (izuddin-helmi-adnan-8VJDHw3daGk-unsplashflip-scaled.jpg), and presents the four services as generic icons (gears, coins, a handshake, cubes). Further down it embeds two YouTube videos, "2D Interactor - Siemens Rulestream Integration" and "[Rulestream] Custom Solutions Configured Faster". The seven Our services cards use abstract or stock images (network lines, a data dashboard, a man before chalk sketches, a crystal shape), with filenames such as pietro-jeng-

n6B49ITx7NM-unsplash and fantastic-4805587_1920. The five Success Stories cards show fans, green bokeh, an old blueprint, a colour wave (wave-4116142_1920) and a purple gradient. The page banners show a finger pointing at icons (Contact), a laptop dashboard (Success Stories), gears (Do I need a configurator?), a blueprint (News & Events) and calipers (Our services). Still images of the actual work appear on the Rulestream page: its 3D CAD banner, the platform diagram with configurator screens, and nine demo videos.

A head of manufacturing judges an engineering automation partner by its output: a configurator screen that turns an order into a valid bill of materials, a 3D model or drawing generated without an engineer redoing it. On the pages where the services and the delivered projects are presented, desks and abstract waves could front any IT firm, so the work is left to videos a visitor must press play on and to one technical page, and the success stories read as blog posts rather than delivered projects.

- **A "Leader in Engineering to Order Transformation" dressed in a 2019 slider template** · high · Fix: Decision 17

  The home first screen sets "Leader in Engineering to Order Transformation" in large white type over a full-width slide run by Slider Revolution 6.1.3, which plays a hero video (SplashVideo.mp4) with a darkened stock desk photo as its fallback. Every captured inner page opens with the same template pattern: a darkened photo banner with a white title and a grey breadcrumb strip. Our services, Success Stories and News & Events then list card grids with small blue "Read More" text links. Image uploads run from 2020/06 to 2024/12, so this older visual language was built later. Every footer carries a large "Imprendi Green 2022" badge and a Twitter bird icon. The site looks about seven years old.

  Buyers choosing a partner to transform their engineering process compare this site with current software and consultancy sites, and a stock slider template tells them the company has not modernised its own front door. The look places Configuratori as a small web agency, below the Siemens partner and Fortune 500 supplier it describes on other pages, so the headline's claim reads as unsupported.

- **The questionnaire button sits below three green buttons, in warning red, at the edge of the first screen** · high · Fix: Decision 8

  Under the opening area the home page stacks three identical green buttons ("Why Configuratori", "Webinars on ETO strategies", "Success Stories", each ≈70 px tall) and, below them, a wider dark red button "Do I need to automate my Business Processes?" (white on #800101), then "Fill out our questionnaire"

in blue heading type that looks like a link but is not one. On desktop the green row starts at ≈884 px, at the very bottom of a 900 px first screen, and the red button sits below it at ≈975 px. Further down, "Our Services" and "Find More" add two more green buttons.

A head of tech arriving from LinkedIn meets three green buttons first, all at the same height as the questionnaire button, and has to sort them; the one the owner wants used is wider but comes last and is red, the colour people read as a warning, and the line that names the questionnaire looks clickable but leads nowhere. With no single lead action, the questionnaire reads as one option among four, and on a laptop most of it sits below the first screen.

- **Six button styles and three typefaces across seven pages** · medium · Fix: Decision 26

  Across the captured pages, "do this" takes six forms: green rounded rectangles (home first screen), green pills ("Our Services", "Find More", "Rulestream Utilities", "Teamcenter Utilities"), a dark red rectangle (home questionnaire), a yellow pill "Submit now" (Contact), a yellow square-cornered "CONTACT US" (Rulestream) and a pale lavender rectangle "Submit" (footer, every page), plus small blue "Read More" text links on card grids. Type uses three families by visible traits: a geometric sans for headings and the footer, a condensed sans for buttons and the menu, and an Arial-like face for body text on Contact, Rulestream, Success Stories and Our services.

  Visitors learn what an enquiry button looks like from one consistent style; here every page teaches a new signal, and the two actions the owner wants used, the questionnaire and contact, take the two colours that appear least often. The mixed type adds to the sense of a site assembled from parts.

- **On phones the first screen holds only the hero area and headline; the questionnaire is two screens down** · high · Fix: Decision 9

  At 390 px the first 844 px show the social icons, the logo, a search icon and a yellow menu button, then the hero video area (captured as its fallback desk photo) with the headline. The first button, "Why Configuratori", starts at ≈1,490 px and the red questionnaire button at ≈1,762 px, after "Get the most out of your Company's assets" and its subline are set across about eleven lines at ≈36 px. On desktop the same buttons begin at the edge of the first screen.

  People tapping through from a LinkedIn post land on a phone; they see the hero area and headline and must scroll past a full screen of large slogan text before any way to start an enquiry appears, so many leave before they find it.

- **On phones the section heading clips to "Configuratio"** · medium · Fix: Decision 25

  At 390 px, "We are the Product Configuration Experts" keeps ≈56 px type, so "Configuration" runs off the right edge and shows as "Configuratio". The opening headline's "Engineering to Order" line also touches the right edge.

  The word that names what the company does is the word cut off, a visible craft slip for a firm selling engineering precision, seen by every LinkedIn visitor who scrolls.

- **Body text runs about 150 characters a line on Our services and Rulestream** · medium · Fix: Decision 28

  On Our services the five "We have…" paragraphs run the full ≈1,110 px content width at ≈16 px in an Arial-like face, about 150 characters a line, with no subheadings or list marks. On the Rulestream page the line beginning "Standard Sales Configurators assemble products" runs the same width.

  Lines that long make readers lose their place, so the company's five reasons to choose it become a grey wall that a busy head of tech skims past.

CONTENT 4/10 · 5 RAISED

Content & Messaging

The two pains your best customers arrived with, engineers redoing every order and errors between sales and production, appear in plain words only deep on the Configuration Project page.

The root cause is copy written from the partner catalogue rather than from the buyer's problem; the home title even files the business under "Home Automation".

SCORE 4/10

CLARITY		3/10. The home title reads "Home Automation" and the first screen names neither the reader nor the pain; only the Configuration Project page says it plainly.
CLAIMS		3/10. "Leader in Engineering to Order Transformation" and "proven track record" carry no named client or result in words; client names exist only as unlabelled logo images.

GUIDANCE		4/10. The preferred first step is labelled as a question, no label offers a call, and asks read "Find More" and "Let us know your impressions".
READABILITY		4/10. Unexplained Siemens names and acronyms lead the menu and service pages, and teasers stop mid-sentence.
LANGUAGE		4/10. "Successfull Projects", a broken footer sentence on every page, and four forms of engineer-to-order.

WHAT THIS ANGLE RAISED

- **The home page title files Configuratori under "Home Automation"** · critical · Fix: Decision 1

  The home page title tag reads "Home Automation Configuration and Engineering to Order". "Home Automation" is the name of a different category (smart-home control). The meta description under it names the company "Configuratori.it" while the site and title elsewhere use "Configuratori.com".

  Buyers referred by Siemens or met at events look the company up by name, and the title is what the results line, the browser tab and any shared link show: a head of manufacturing reads "Home Automation" and concludes this is a smart-home supplier. The likely cause is the page name "Home" run into the title, but the effect is a misfiled business on the one line every arriving visitor and search engine reads first. It is a one-line fix with the highest return in this report.

- **Siemens and internal names lead the menu and pages with no explanation** · high · Fix: Decision 12

  The menu opens on service names such as "Teamcenter Product Configurator Consulting", "Rulestream", "KBE" and products "C-graph & 2D Interactor", "rsDeployer", "MapIt". No captured page expands "KBE". The home page sets Teamcenter and Rulestream logos above a "Find More" button. The Our services grid opens with "I-MAAT" ("Mathematical Analytical Application Tool Project co-financed by..."). The Rulestream page speaks in Siemens' words ("Siemens PLM's Rulestream is the ideal tool"), the webinar in acronyms ("CTO + ETO integration"), and the contact form asks visitors to tick "RPA".

  You told me most of the heads of tech and manufacturing you want do not know these names. To them the menu reads as a list of someone else's software, so they cannot find the page about their own problem and leave. The Siemens names are worth keeping for the visitors who arrive from

Siemens listings, but as the explanation behind a plain task, not as the label in front of it.

- **A first-screen button sells an October 2024 webinar; the news list shows a builder's page name** · medium · Fix: Decision 22

  The home button "Webinars on ETO strategies" opens the webinar page dated "October 23, 2024", still showing its registration link. News & Events lists only two items, one titled "Landing page Webinar Compressor", an internal page name, with a teaser that reads "Technical Conversation Standard and customized control and management Event presentation…".

  A LinkedIn visitor who clicks the webinar button finds a past event offered as if open, and the only other news item reads like a draft; both suggest the site, and possibly the firm, is not active. The button spends one of three first-screen slots on content that no longer leads anywhere.

- **Teasers and page descriptions stop mid-sentence; one description is in Italian** · medium

  Success Stories teasers end mid-thought: "Key factors in the configuration of an industrial fan There…" and "Challenges Procurement decisions based on cost and product configuration Companies…". The page descriptions are those same cut excerpts: Success Stories ("…There…Read More"), News & Events, and Contact us (a run of phone and fax numbers). The Our services description, on an en-GB page, is in Italian: "Configuratori è Service Partner Siemens worldwide per i…Read More".

  In a results list or a LinkedIn link preview these lines are what a manager reads before deciding to click, and a sentence that stops at "There…" or switches to Italian tells them nothing. On the Success Stories page the teasers are the only words between the visitor and the proof, so they need to carry the client and result.

- **Spelling and grammar slips on the home page and in a footer line on every page** · medium · Fix: Decision 24

  Slips across the captured pages: "Successfull Projects" (home section heading); the footer on every page, "Innovating sales processes, automating product development by improving the effectiveness and efficiency of our customers are our goals."; "© Copyright Configuratori.com All right reserved"; "Chief Technology Office" (webinar); "its' headquarters" and "Configuration allow the manufacturer" (Who we are); "The tools for wood can be considered an assembled" (Configuration Project); "Enhance a feature per item that does not exist in the management system" (Rulestream); the UK number shown as

"+44 07807 990 102". Engineer-to-order appears as "Engineering to Order", "Engineering-to-Order (ETO)", "Engineer to order" and "ETO".

A firm selling rules that make every configuration correct is judged on precision, and a misspelt heading on the home page plus a broken sentence in every footer read as carelessness to an engineering director. Four forms of the category name also make it look like several things. These are minutes of editing.

INVESTOR 4/10 · 5 RAISED

Investment & Growth

The company sells configuration projects, Rulestream and Teamcenter consulting and training, and owns tools such as rsDeployer, MapIt and SellFan.

No captured page says how any of those tools is licensed or supported, so any income that renews stays invisible. The root cause is that the site lists capabilities instead of packaged offers and named people.

SCORE 4/10

FACTS		4/10. Founding year, start date and company name each appear in more than one form, and the industry claims disagree between pages.
BUSINESS		4/10. Services are readable, but own software products sit in the same brochure with no licence or support terms, and no first engagement is packaged.
DEFENSIBILITY		5/10. Siemens Expert Partner standing and non-Siemens CAD work are real, but most products, proof and stated leads run through Siemens with no second leg named.
MOMENTUM		*not scored. Nothing kept in this report supports a score here.*
PEOPLE		4/10. The VAT number and addresses are on every page, but the three founders are unnamed and one sales contact carries the main number.

WHAT THIS ANGLE RAISED

- **Own software products sit inside a services brochure, with no licence or support terms shown** · high · Fix: Decision 31

  The Our Products menu lists seven entries: C-graph & 2D Interactor, Rulestream utilities (with rsDeployer, Salesforce Plugin, Inventor Integration and MapIt beneath it) and SellFan. The Configuration Project page names a further product, "the SellPumps software platform", and the System integration page names a "Configuratori Integration Platform". The Our Services page puts I-MAAT, a co-financed research project, among its seven service cards. The only hint of anything that renews is the line "provide you with ongoing support and value-added services". The Contact us form asks "Are you interested in :" and offers only Configuration, Design Automation, RPA and Other. No captured page states how any product is sold: as a licence, a subscription, a maintenance contract or a support contract.

  A partner or acquirer reading these pages sees a project consultancy. The line that could renew, licences and maintenance on the Rulestream utilities and SellFan, has no form, terms or adoption shown, and an enquiry about it has to go under "Other". People who back engineering consultancies value contracted maintenance and licence income well above one-off projects, so a business whose renewing line is invisible gets priced as day-rate work. The first question diligence asks: what share of revenue renews each year, and from which product?

- **The founders are unnamed, and the only named sales contact's number is the company's main Italy line** · high · Fix: Decision 21

  Who we are says the company was "founded in 2008 by three partners" and names none of them. The Contact us page names one person, "Marco Lotti marco.lotti@configuratori.com", with "+ 39-335-7571048". The same number is the Italy line in the header of every captured page and the only phone in the footer's Get In Touch block. The only other named staff are Andrea Buda, "Chief Technology Office at Configuratori.it", on the webinar page, and Matteo Casetta in that page's author markup. No captured page shows a leadership team, roles or a board.

  A partner, acquirer or senior hire looking at a firm of 25 engineers sees one named contact for sales, whose number is also the Italy line in the header and the only phone in the footer, and three founders whose names and roles they cannot check. Backers price that as key-person risk. For a firm whose founders each claim thirty years of experience, succession is the obvious next question. The first question diligence asks: who leads the company

today, and who takes over sales and delivery if Marco Lotti or a founding partner steps back?

- **Three start dates and three company names across the captured pages** · high · Fix: Decision 19

  Who we are says "Configuratori Srl, founded in 2008". The home page says "We have been helping companies automate their sales and design processes since 2009". The home-page Rulestream logo reads "Certified Experts since 2004", four years before that founding year. The name also varies: "Configuratori.it S.r.L." heads the Contact us block, Who we are uses "Configuratori Srl", the home meta description says "Configuratori.it is a company", and the footer reads "© Copyright Configuratori.com". The headcount, 25 engineers and developers, appears on one page only. The header phone lines (Italy, USA, Poland, UK) do not match the listed offices (Florence, Milan, Turin, Helsinki, Warsaw, Cleveland): there is a UK line but no UK office, and a Helsinki office but no Finland line.

  None of these is impossible on its own. An Srl can be written with or without its domain, and founders can hold a certification older than their company. But a partner checking the registration, or an assistant asked who this company is, meets several answers for the same facts, and inconsistent basics read to backers as weak control. The first question diligence asks: which entity holds the customer contracts and the Siemens partnership, and when did it start trading?

- **Siemens referrals land on custom quotes, with no fixed first engagement to pass along** · high · Fix: Decision 15

  The Our Services page shows seven cards whose teasers describe topics rather than offers. The Strategic consulting & Assessment card opens "The global market is like a chess game:". The "Do I need a configurator?" page holds one sentence and an embedded Microsoft Forms frame, and says nothing about what the visitor receives after answering. The Rulestream page closes with "Interested? Let us know your impressions." No captured page names a first engagement with a scope, a duration, a deliverable or a price range.

  The owner says leads come from Siemens referrals and word of mouth. For this business, that is the input that compounds: delivered projects and Siemens partner managers sending the next client. A referral travels best when there is a named, bounded thing to refer to, such as "ask them for their two-week configuration assessment". Without one, each referral starts as an open conversation and depends on whoever takes the call. A fixed first step

also gives the questionnaire somewhere to lead, and it is a step a head of manufacturing can approve without a full project budget. The first question diligence asks: how long does a referred lead take to become a signed project, and what do they buy first?

- **Two different industry lists, and a system integration page that reads like a generic IT firm** · medium · Fix: Decision 23

  Our Services claims a track record "across various industries, such as aerospace, automotive, industrial equipment, medical devices, and consumer products". The System integration page says "We are a leading provider of system integration services" and lists industries including "Banking and finance" and "Education and media". The delivered work on the captured pages (industrial fans, switchgear, conveyor plants, pumps, woodworking tools, photovoltaic simulators) is all in manufacturing and energy equipment. No captured page shows a banking, retail or education client.

  A partner or acquirer reads this market as build-to-order manufacturers who configure engineered products, bounded by the Siemens and CAD installed base. A page claiming leadership in banking and education integration contradicts that market and the delivered work, so diligence discounts the other claims until it knows which are real. It also blurs the niche the owner wants to own. The first question diligence asks: in which industries has the company actually delivered, and which does it intend to grow?

INDUSTRY 3/10 · 6 RAISED

Market & Category

Filed as home automation under an unbacked "leader" claim, so build-to-order buyers pass it by.

Build-to-order manufacturers choose a configuration and design-automation partner on standing with the platform they run, named references from products like theirs with results in quote time or engineering hours, and a bounded first step on their own product. The material for all three exists: a Siemens Expert Partner emblem, a 2024 webinar co-presented with Siemens, and worked examples from pumps to woodworking tools. It sits under a home title that reads "Home Automation", a first-screen "Leader" claim with no basis, and five success stories that name no customer and no result.

SCORE 3/10

POSITION	3/10. The home title reads "Home Automation..." and the first screen leads with an unbacked "Leader in Engineering to Order Transformation".
PROOF STANDARD	3/10. No captured page names a customer with a result; 19 unnamed logos and five anonymous story cards carry the proof, and the Siemens co-presented webinar is the strongest item.
LANGUAGE	3/10. The title misfiles the category, though the Rulestream page draws the configure-to-order versus engineer-to-order line precisely.
BUYING FIT	4/10. A questionnaire exists, but it promises only to "discover the advantages", states no time or output, and no captured page offers a call.

WHAT THIS ANGLE RAISED

- **"Leader in Engineering to Order Transformation" leads the first screen with no basis on any captured page** · high · Fix: Decision 4

  The home first screen's largest text is "Leader in Engineering to Order Transformation". No captured page names a ranking, analyst, award, period or measure behind it. The claim repeats in weaker forms elsewhere: "We are the Product Configuration Experts" on the home page and "We are a leading provider of system integration services" on the System integration page.

  Heads of tech and manufacturing at build-to-order manufacturers buy this kind of partner on references from products like theirs, and an unexplained "leader" reads to them as sales language, which lowers trust in the real Siemens standing printed further down. A leadership claim also invites comparison with the largest platform vendors and global integrators, a fight a 25-person specialist does not need to pick. The phrase "Engineering to Order Transformation" is not a term buyers search, so the claim costs credibility without adding findability.

- **No captured page names a customer with a result in the measures build-to-order buyers compare** · high · Fix: Decision 5

  The Success Stories page shows five cards, such as "SellFan : the Industrial Fan configurator for HVAC systems" and "Switchgear Configurator", and none names a customer or states a result. The home logo carousel of 19 images after "Successfull Projects" has "none with alt text (18 empty, 1 without an alt attribute)", and the Customers page logos are links "none with an accessible name". The home page promises to "create offers faster than your competitors" with no figure. The Who we are page claims "Fortune 500

clients" without naming one. The one named user on the Rulestream page is "John Crane uses Rulestream for 3D design with Solid Edge.", dated "Demonstration session at Solid Edge University 2016."

In this category the proof that moves a head of tech is a named reference from a similar product with a before-and-after in quote turnaround, engineering hours per order or order errors reaching production, exactly the two pains the owner's best customers arrived with. Logos without stories read as a wall of names anyone could post, and anonymous story cards cannot be checked or passed to a colleague. The newest named proof is from 2016, so a buyer reads the track record as old. Without this, LinkedIn and Siemens-listing visitors have no reason to prefer Configuratori over the in-house way.

ACCESSIBILITY

Screen-reader users hear none of the customer names in the home logo carousel or the Customers page logos, which carry the site's main proof.

- **The Siemens Expert Partner standing appears only on the Rulestream page, unlinked to its listing and unnamed in text** · high · Fix: Decision 10

  The Rulestream page shows an "Expert Partner, Digital Industries Software" emblem beside the Siemens logo; its file has "empty alt text". The partner sentence, "Configuratori is Siemens' worldwide Service Partner for configuration projects with Rulestream and Product Configurator software tools.", links only to the directory's front page, "https://partnerfinder.plm.automation.siemens.com", not to Configuratori's listing. The home page shows Teamcenter and Rulestream product logos and "Certified Experts since 2004" with no issuer, while the home first screen and title say nothing of the partnership.

  For a buyer arriving from a Siemens listing or event, partner standing in the vendor's own vocabulary is a table stake, and for a buyer who does not know Siemens names, it is the clearest outside proof of competence. As shown, the designation is legible only in an image, cannot be checked without searching the directory, and is absent from where search engines and AI assistants read first. "Certified Experts since 2004" names no certifying body and predates the 2008 founding stated on the Who we are page, so an insider cannot tell what was certified or who holds it.

- **The entry step promises "advantages" but states no time, output or commitment, and no captured page offers a call** · high · Fix: Decision 7

  The home page's red button "Do I need to automate my Business Processes?" leads to a page that says only "Fill out the questionnaire and discover the advantages that the Configuratori can bring to your company." above a

Microsoft Forms embed ("frame 640px × 10000px"), with no length, no stated output and no reply time. The Contact page's form is titled "Request for information" with interests "ConfigurationDesign AutomationRPAOther". No captured page offers a way to book a call, although the owner named "Book a call with someone on your team" as a preferred first step. The Strategic consulting & Assessment service exists in the menu but is not offered as a first step.

Build-to-order manufacturers rarely buy configuration work cold; they expect a bounded first step on their own product, such as an assessment of one order family or a demo on one of their products, with a stated time and a written result. A questionnaire of unknown length that promises "advantages" reads as a sales qualification form, so a senior buyer has no reason to spend the time. The lack of a call route removes the step heads of tech usually prefer, and leaves the generic request form as the only alternative.

- **Generic integration boilerplate and side offers file an engineer-to-order specialist as a general IT supplier** · medium · Fix: Decision 14

  The System integration page lists industries "Banking and finance", "Healthcare and life sciences", "Retail and e-commerce" and "Education and media". The Our services page leads its cards with "I-MAAT" and claims "clients across various industries, such as aerospace, automotive, industrial equipment, medical devices, and consumer products"; its meta description advertises "Accelerate Agile Development with Mendix" and Modelica in Italian. The menu lists Uipath and Boomi, and the contact form offers RPA.

  A head of tech choosing a configuration partner looks for a specialist in products like theirs; an industry list headed by banking and education reads as a generic page any integrator could publish, and it contradicts the build-to-order depth the Configuration Project page actually shows. Spreading the offer across RPA, low-code and research projects puts Configuratori beside large IT services firms on the buyer's list, where its strongest proof does not count.

- **The Siemens page still says "Siemens PLM" beside an emblem that reads Digital Industries Software** · medium · Fix: Decision 29

  The Rulestream page text uses "Siemens PLM" in its lead paragraph and in the heading "Siemens PLM Rulestream will:", while the Expert Partner emblem on the same page reads "Digital Industries Software", and the webinar page names "Siemens Digital Industries Software".

  Visitors arriving from Siemens listings and events know the vendor by its current name, and the site's own pages show which name is current, so the

older label in the lead copy reads as a page last written years ago. For a partner whose main proof is Siemens standing, that undercuts the impression of a current, active relationship.

LIMITS OF THIS VIEW

- No current Siemens partner directory listing was supplied, so the actual designation, scope and date of Configuratori's Siemens standing are unverified. I judged only how the site states and links it.

BUYER 3/10 · 6 RAISED

The Visitor's Chair

Written from the seat of a head of tech and a head of manufacturing, built from your brief: a simulated perspective, not interviews.

I can't find one manufacturer like mine with a result, so I don't enquire.

I came from a LinkedIn post looking for proof that engineers stop redrawing every order; the home page talks about "Company's assets", the five success story cards name no customer and no outcome, and the 19 logos carry no story. From the head of manufacturing's seat, arriving from a Siemens listing on the Rulestream page, the "to order" questions place me faster, but the same missing results and missing call stop me.

SCORE 3/10

FIT	4/10. It is clear this is configuration and engineering-to-order work, but the home page never names engineers redoing orders or sales-to-production mistakes, and the title says "Home Automation".
PROOF	3/10. Siemens partnership is linked and checkable, but no success story card names a customer or a result and the 19 logos are pictures with no text.
FIRST STEP	3/10. The questionnaire says nothing about length, who reads it or what comes back, and no captured page describes a first engagement's scope, time or price.
PERSON	4/10. Marco Lotti is named with email and phone on Contact us, but no page offers booking a call and no form states a reply time.

CARE	—	*not scored. The brief names no existing-customer or user seat.*

WHAT THIS ANGLE RAISED

- **Five success stories and 19 logos, and not one manufacturer like me with a result** · high · Fix: Decision 5

  The Success Stories page shows five cards, such as "SellFan : the Industrial Fan configurator for HVAC systems" and "Switchgear Configurator"; none of the five cards names a customer, a company size or a result. The home page's "Successfull Projects" carousel and the Customers page each hold 19 logos with no alt text and no caption, so the customer names exist only as pictures. The one named use on the Rulestream page is "John Crane uses Rulestream for 3D design with Solid Edge." next to "Demonstration session at Solid Edge University 2016."

  My deciding worry is whether this works on products as messy as ours and actually stops engineers redrawing every order. A logo tells me you worked with a company, not what changed for its engineers, and a 2016 demo is the newest named example I can find. With nothing I can check or show my own team, I keep the way we work today. If I ask an assistant who uses Configuratori and with what result, your own text gives it nothing to quote, because the names live in images.

  ACCESSIBILITY

  Screen-reader users hear none of the 19 customer names on the home page or the Customers page, because every logo has empty or missing alt text.

- **The home page never says it stops engineers redoing every order, and the title says "Home Automation"** · high · Fix: Decision 4

  The home page's first screen reads "Leader in Engineering to Order Transformation", then "Get the most out of your Company's assets" and "We have been helping companies automate their sales and design processes since 2009". The four service tiles below speak of "Product Configuration" and "Manage your production and sales with our assisted approach to the Product Configuration". Neither engineers redoing every order nor mistakes between sales and production is named on the home page. The page's title tag is "Home Automation Configuration and Engineering to Order". The Rulestream page is where "to order" manufacturing is asked about in plain words.

  I clicked from a LinkedIn post because my engineers redraw every custom order. My ten-second read is "a consultancy that automates sales and design

processes somehow", not "people who fix my problem", so I scroll for my problem, meet Siemens product names, and close the tab. "Home Automation" in the title is what a search result or a shared link shows, and it reads as smart-home work, which places me in the wrong place before I arrive. From the head of manufacturing's seat, a Siemens listing lands on the Rulestream page, whose "to order" questions place me sooner, but the home page still never names the sales-to-production mistakes I came to stop.

- **The questionnaire page doesn't say how long it takes, who reads my answers or what I get back** · high · Fix: Decision 7

  The "Do I need a configurator?" page says only "Fill out the questionnaire and discover the advantages that the Configuratori can bring to your company." and "(the processing of replies will be strictly confidential and reserved for the sole purpose of agreeing on any improvements)", above a Microsoft Forms frame 10,000 px tall. No sentence on the page around the form states the number of questions, the time it takes, who reads the answers, when they reply or what I receive. On the home page, "Fill out our questionnaire" is a heading, not a link; the link is the red button "Do I need to automate my Business Processes?".

  Before I hand over details of how my engineering team works, I want to know what it costs me in time and what comes back: a written view, a call, or a sales chase. "Agreeing on any improvements" reads like the start of a sales process, not an answer to my question. With nothing promised in return on the page I land on, I leave the form for later, and later rarely comes.

- **I want to talk to an engineer, and no page lets me book a call** · high · Fix: Decision 6

  None of the seven pages captured in full offers a way to book a call. Contact us has a "Request for information" form and names "Marco Lotti marco.lotti@configuratori.com" for Sales and Marketing; neither that form nor the footer form on every page says when anyone replies. The Rulestream page ends with "Interested? Let us know your impressions." The phone links are written without the international "+", for example "tap-to-call tel:393357571048 (shown as "+39 335 7571048"): broken, no + country code, so a phone dials it as a local number".

  A call with someone who knows CAD rules is the step I would actually take, because my question is technical and I want to judge your people. Instead I get a sales contact and a message box that promises nothing, so the enquiry feels like joining a list. Arriving from LinkedIn on my phone, the only number I

can tap is in the footer, and it is dialled as a local number rather than reaching Italy, so the quickest route to a person fails exactly when I am ready.

- **What does a first project cost, how long does it take, and what does my team have to give?** · medium · Fix: Decision 15

  The Configuration Project page promises "We use our Configuratori Project Management Methodology, which ensures your projects are delivered on time, on budget, and on scope" and "business productivity improves, paying off the investment in a few months." No captured page states a first engagement's scope, duration, deliverable or price range, or what my engineers must provide. The Our services page lists "Strategic consulting & Assessment", whose card teaser reads only "The global market is like a chess game:...".

  Even a good first call ends with "what would this take?", and I need a number to ask my budget holder for. "A few months" payback with no starting cost or timeline tells me nothing I can plan around, and moving our engineering rules out of people's heads is the change I fear most. Without a bounded first step, I stay with redrawing orders by hand because I can see what that costs.

- **"Webinars on ETO strategies" sends me to one session from October 2024 I can no longer watch** · medium · Fix: Decision 22

  The home page button "Webinars on ETO strategies" leads to a single webinar page dated "October 23, 2024" whose only route is "Registration link: https://lnkd.in/dDbRSyxe". The page text names no recording, slides or next date. News & Events lists that webinar and one other item.

  Coming from LinkedIn, I am only curious, and a webinar is the low-risk way I would get to know you. A past date with a registration link tells me I missed it and nothing is waiting, so the one step that suits where I am leads nowhere. The topic, "automation from inquiry to order", is exactly what I would have watched.

WHAT I COULD NOT JUDGE FROM THIS MATERIAL

- The Who we are, Webinar, Configuration Project, Customers and System integration pages were read as page text only, with no screenshots. Their look

is unassessed.

- On the "Do I need a configurator?" page, the questionnaire is a forms.office.com frame that rendered blank in the capture and was not opened. Its questions, length and completion are unassessed.
- Only the home page was captured at phone width. The other pages were captured at desktop width only.
- Individual success-story pages, product pages (such as SellFan), the Partnership, Careers and Where we are pages, and the Italian version were not captured.
- Menus were closed in the screenshots. The interaction map was cut short (57 lines not shown), so recorded link destinations on some pages are incomplete.
- No form was submitted, so confirmation and follow-up after an enquiry are unassessed.
- Embedded media such as video rendered blank in the capture, so its content was not judged.

This audit uses AI and can make mistakes or miss context. Verify important findings before acting on them.
